EXECUTIVE SUMMARY

DLZ Michigan, Inc. was retained by the Detroit Building Authority (DBA) to conduct a Phase I Environmental Site Assessment (ESA) of the approximately 23-acre property located at 14044 Schaefer Highway and including 23 adjoining residential parcels along Ward and Compass Streets in Detroit, Wayne County, Michigan; hereinafter referred to as the Subject Property. The Subject Property also includes vacated alleyways, and vacated portions of Hartwell Avenue, Kendall Street, and Intervale Street. The Main Parcel of the Subject Property consists of the unused former Coolidge Bus Terminal which sits on approximately 20 acres of land and contains eight vacant buildings. The Subject Property Main Parcel is owned by the Detroit Department of Street Railways, a predecessor to the Detroit Department of Transportation (DDOT). The adjoining residential parcels are owned by the Detroit Land Bank. This Phase I ESA was performed at the request of the DBA prior to proposed redevelopment of the Subject Property.

This Phase I ESA was conducted in general accordance with ASTM Standard Practice E1527-13 and constitutes “all appropriate inquiry into the previous ownership and uses of the subject property consistent with good commercial or customary practice,” as defined at 42 USC §9601(35)(B). The Phase I ESA was conducted to identify recognized environmental conditions (RECs) that may exist, or may have historically existed, on the Subject Property.

The Main Parcel of the Subject Property has historically been used as a streetcar and bus terminal, with the outlying parcels historically used for residential purposes. The Main Parcel was used for streetcar storage and maintenance by 1928, and later transitioned to a combined streetcar and bus maintenance and storage facility, followed by a bus terminal. Activities that occurred at the site included bus refueling, bus washing, bus maintenance, and indoor and outdoor bus storage.

According to drawings provided to DLZ by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) Remediation and Redevelopment Division (RRD), underground storage tanks (USTs) were formerly located west, north, and east of the Main Building on the Main Parcel of the Subject Property. Aboveground storage tanks (ASTs) were also formerly located north of the Main Building. Two oil water separators were also shown to the east and northwest of the Gas House, which was located in the northern portion of the Main Building. Tanks historically located onsite contained a variety of fuels and lubricants (i.e. diesel, engine oil, gasoline, waste oil, heating oil, etc.) and ranged in size from 500 gallons to 50,000 gallons. A total of 19 USTs were removed or closed-in-place at the Subject Property in late 1999 and early 2000. Six new USTs were subsequently installed at the Subject Property in 2001 and remain in-place. These include four 25,000-gallon diesel tanks northwest of the gas house, one 10,000-gallon gasoline tank north of the gas house, and one 1,000-gallon used oil tank west of the pump house. A 550-gallon tank of unknown contents may remain at the Main Parcel at an unknown location.

Five confirmed releases have been reported at the Subject Property, including three in 1999, one in 2000, and one in 2006. In addition, according to inspection notes from a December 1994 inspection by the Detroit Fire Department, approximately 800 gallons of standing diesel was discovered within the pump house “aqua system vault” which was subsequently removed. The 1999 confirmed releases were identified during construction activities related to UST removal and/or closure. The confirmed release in 2000 occurred when a diesel transfer pipe failed near the northwest portion of the Main Building. The confirmed release in 2006 was due to a leaking diesel fuel clamp. Soil and groundwater contamination

was documented in an Amended Final Assessment Report (2003), historical confirmed release reports, a Subsurface Investigation and Feasibility Study (2012), as well as the 2019 Phase II ESA conducted by DLZ.

At the time of the DLZ site reconnaissance, the Main Parcel contained eight vacant structures, including the former Terminal Building in the northwestern corner of the Subject Property, a guard shack and dispatch building along Schaefer Hwy west of the Main Building, the Main Building itself which occupies most of the western portion of the Main Parcel, the Fare Box Building in the north-central portion of the Subject Property, and the Heating Plant Building northeast of the Fare Box Building. A large antenna tower and associated building are located in a fenced area east of the Main Building. The tower is supported with three guy-wires that are anchored on-site. An older antenna is present in the northeast portion of the Main Parcel. Several residential structures were present on the southern and eastern portions of the Subject Property.

Several four-foot-deep pits (approximate) containing standing oily water were observed within the former bus repair shop in the north-central portion of the Main Building. A phenol-like odor was observed in some areas of the Main Building on the Subject Property.

DLZ reviewed the Environmental Data Resources (EDR) database report to assess which environmental record sources identified sites located on, adjacent, or surrounding the Subject Property. EDR identified 107 sites of known or potential contamination to be within the search radii of the Subject Property. DLZ evaluated the sites identified by EDR and determined that 71 identified sites are located within the approximate minimum search distance established by ASTM E1527-13 and/or EDR. The Subject Property was listed on the following databases: FINDS, RCRA NONGEN/NLR, ECHO, AST, LUST, UST, WDS, Financial Assurance, Inventory, and RGA LUST.

The northern and western adjoining properties have historically been commercial/industrial in use, including a used automobile parts yard, machine shop, truck and tool repair shops, a roofing company, and several warehouses. The northwest adjoining property was identified as a historical dry cleaner, though this appears due retail sales of laundry and dry-cleaning equipment and not operation of a dry cleaners. The eastern and southern adjoining properties have historically been primarily residential.

In addition to the adjoining properties described above, a former manufactured gas plant was located approximately 300 feet north of the Subject Property at 14270 Schaefer Highway. Standard historical sources document a bulk above ground gas tank located approximately 300 feet north of the former Heating Plant Building from at least 1937 (the earliest historical aerial photograph available) through 1967. The tank was removed by 1972. On historical topographic maps, the tank is labelled Gas Tank. Prior to development of the Subject Property and the manufactured gas plant around 1935, a small creek formerly flowed from east of the Gas Tank area south onto the Subject Property as shown on the 1934 topographic map. This property is also listed in the WDS, AUL, and LUST databases, indicating potential contamination.

Due to the potential contaminated nature of this property, the property at 14270 Schaefer Hwy represents a REC in connection with the Subject Property. Based on the status and/or distance from the Subject Property, as well as the predominance of low permeability silty clay soils in the Detroit metropolitan area which would likely inhibit migration of contaminants, the remaining sites of known or

potential environmental contamination do not appear to represent RECs in connection with the Subject Property.

DLZ has performed this Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E1527-13 of the Subject Property. Any exceptions to, or deletions from, this practice are described in the appropriate sections of this report. In summary, this assessment has revealed the following RECs in connection with the Subject Property:

- The historical use of the Subject Property for bus maintenance and outdoor bus storage;
- The current and former presence of USTs, ASTs, vaults, and/or oil/water separators on the Subject Property, including approximately 800 gallons of standing diesel fuel discovered within the pump house “aqua system vault” during a December 1994 inspection by the Detroit Fire Department;
- Five confirmed releases reported at the Subject Property resulting in soil and groundwater contamination on the Subject Property and the presence of elevated concentrations of contaminants in the soil and groundwater at the Subject Property at levels that exceed EGLE Part 201 Residential Generic Cleanup Criteria and Screening Levels;
- The phenol-type odor and oily water in pits in the north-central portion of the Main Building;
- The historical industrial uses of the adjoining properties to the north and west; and,
- The former MGP site located approximately 300 feet north of the Subject Property.

DLZ previously completed a Phase I ESA on a portion of the Subject Property (Main Parcel) in November of 2019. Findings of that assessment were incorporated into this report where applicable. The initial Phase I ESA was also the basis for performance of a Phase II ESA described below.

DLZ completed a Phase II ESA in November 2019, with a final report date of May 2020, to evaluate previously identified RECs at the Subject Property. Based on the data collected as part of the Phase II ESA, subsurface soils at the Subject Property contain contaminants at concentrations which exceed MDEQ Part 201 Residential Generic Cleanup Criteria and Screening Levels. As a result, the subject property is defined as a “facility” by Section 20101(1)(r) of Michigan’s Natural Resources Environmental Protection Act, 1994 Public Act 451, as amended (NREPA). A “facility” is defined as: “any area, place or property where a hazardous substance in excess of the concentrations which satisfy the requirements of section 20120a(1)(a) or (17) has been released, deposited, disposed of, or otherwise comes to be located.”

1.0 INTRODUCTION

DLZ Michigan, Inc. (DLZ) was retained by the City of Detroit Building Authority (DBA) to perform this Phase I Environmental Site Assessment (ESA) of the property located at 14044 Schaefer Highway as well as 23 adjoining residential parcels along Ward Avenue and Compass Street in Detroit, Wayne County, Michigan; hereinafter referred to as the Subject Property. The Subject Property consists of the unused former Coolidge Bus Terminal, which sits on approximately 20 acres of land and contains eight vacant buildings, as well as 23 residential parcels along Ward Avenue and Compass Street including associated alleyways and vacated portions of Hartwell Avenue, Kendall Street, and Intervale Street. The Subject Property Main Parcel is owned by the Detroit Department of Street Railways, a predecessor to the Detroit Department of Transportation (DDOT), while the residential parcels are owned by the Detroit Land Bank. This Phase I ESA was performed at the request of the DBA prior to proposed redevelopment of the Subject Property.

1.1 PURPOSE

The purpose of a Phase I ESA is to identify recognized environmental conditions (RECs), as defined by ASTM Standard Practice E1527-13. A Phase I ESA conducted in general accordance with ASTM Standard Practice E1527-13 constitutes “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice,” as defined at 42 USC §9601(35)(B). This Phase I ESA was performed at the request of the DBA prior to proposed redevelopment.

1.2 LIMITATIONS AND EXCEPTIONS

The findings and professional opinions conveyed in this Phase I ESA are based in part on information obtained from a variety of outside sources enumerated herein. DLZ did not verify the accuracy of that information, and cannot and does not guarantee its authenticity, accuracy, or reliability.

This Phase I ESA is not a comprehensive site characterization and should not be construed as such. The professional opinions presented in this report are based on the findings from the visual site reconnaissance, review of specified regulatory records and historical sources, and information obtained through personal interviews. The availability and quality of site documentation limit the regulatory agency and site history review. Undocumented or unauthorized releases of hazardous materials, the remains of which are not readily identifiable by visual inspection, are very difficult and often impossible to detect within the Scope-of-Services.

Limitations associated with data gaps are discussed in Section 7.0.

1.3 SPECIAL TERMS AND CONDITIONS

This Phase I ESA was conducted in accordance with the Professional Services Contract between the City of Detroit, Detroit Building Authority and DLZ Michigan, Inc. There were no special terms or conditions beyond those agreed-to within the Professional Services Contract.

1.4 USER RELIANCE

The services described in this report were performed consistent with generally accepted practices. No other warranty, express or implied, is made. This ESA is not a guaranty that there is no subsurface contamination, nor can it be warranted that any areas of environmental concern noted in this report are the only areas of potential contamination at the Subject Property.

This Phase I ESA was prepared by DLZ for the exclusive use of the City of Detroit, the DDOT, and the DBA. The findings and professional opinions presented in this report by DLZ are solely for the use and information of the City of Detroit, DDOT, and the DBA at the time the report was completed and may not be relied on by third parties. Any reliance on this report by a third party is at such party's sole risk.

2.0 SITE DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The Subject Property consists of the former Coolidge Bus Terminal property located at 14044 Schaefer Highway as well as 23 residential parcels along Ward Avenue and Compass Street in Detroit, Wayne County, Michigan. Addresses and associated Parcel Numbers for the parcels that comprise the Subject Property are included in **Table 1**. A Property Location Map is included as **Figure 1**. A Property Layout map, including approximate locations of subsurface infrastructure and historical tank locations is presented as **Figure 2**. An ALTA Survey including a legal description for the Main Parcel of the Subject Property provided to DLZ by the DBA is included in **Appendix A**. A legal description for the Subject Property in its entirety has not been made available to DLZ.

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The Subject Property consists of approximately 23 acres of land located in an industrial and residential area within the city limits of Detroit. The Subject Property is bound to the west by Schaefer Highway, and is located north of Compass Street and west of Ward Avenue. I-96, Jeffries Freeway, is located approximately ¼ mile south of the Subject Property. The elevation of the property is approximately 645 feet above mean sea level.

2.3 CURRENT USE OF THE PROPERTY

The main portion of the Subject Property is occupied by the former Coolidge Bus Terminal which is comprised of a Main Building and several smaller outbuildings, as well as paved and vegetated areas. An approximately 470-foot in-use antenna and smaller unused antenna are present in the eastern portion of the Subject Property. The southern and eastern portions of the Subject Property consist of several single-family residential structures and associated outbuildings, as well as grass covered lots. The Subject Property also includes alleyways and vacated portions of Hartwell Avenue, Kendall Street, and Intervale Street adjoining the Main Parcel to the south and east. The majority of the Subject Property is vacant, although one residence located at 13500 Compass Street appeared occupied.

2.4 STRUCTURES, ROADS, OTHER IMPROVEMENTS ON THE PROPERTY

The Main Parcel of the Subject Property contains an approximately 250,000-square-foot Main Building. Fire and water damage were observed in the Main Building, particularly in the northwest and east-central portions. A former Administrative/Terminal Building is present northwest of the Main Building. The Fare Box Building and Heating Plant Building are located northeast of the Main Building. Two small guard building are located to the west of the Main Building, along Schaefer Hwy. Concrete paved areas were present surrounding the Main Building, and gravel covered paved areas were present in the eastern portion of the Subject Property. Abandoned streetcar tracks and a concrete slab from a former building were observed in the east-central portion of the Subject Property. A combination of chain-link fencing and concrete barrier wall surrounds the perimeter of the Main Parcel, with gates present along Schaefer Hwy. The easternmost and southernmost portions of the Subject Property consist of several residential structures, as well as vacated alleyways and vacated portions of Hartwell Avenue, Kendall Avenue, and Intervale Avenue.

2.5 CURRENT USES OF THE ADJOINING PROPERTIES

According to ASTM E1527-13, adjoining properties “shall be described in the report if they are likely to indicate recognized environmental conditions in connection with the adjoining properties or the property.” Land-use adjoining the Subject Property which may represent a REC include the used auto parts shop/junk yard to the west and commercial and industrial land-uses to the north of the Subject Property. Adjoining properties also include residential dwellings to the east and south.

3.0 USER PROVIDED INFORMATION

The Users of the Phase I ESA, as defined by ASTM Standard E1527-13, are City of Detroit, DDOT, and the DBA. DLZ provided a Phase I ESA User Questionnaire to Ms. Donna Rice for completion on behalf of the DBA and DDOT. The purpose of the questionnaire was to obtain information regarding the Users’ knowledge of the Subject Property. The questionnaire was then provided to Mr. Boris Timarac, former

Safety Administrator of DDOT, for completion regarding the Main Parcel. The User Questionnaire was also provided to Mr. Richard Czeck, Chief Safety Officer with DDOT, for completion regarding the residential parcels along Ward Avenue and Compass Street. Copies of the completed questionnaires are included in **Appendix B**.

3.1 TITLE RECORDS

A chain of title search was not completed as part of this Phase I ESA.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

Mr. Timarac and Mr. Czeck indicated they have no knowledge of environmental liens or activity and use limitations (AULs) relating to the Subject Property. See Section 4.2 for further discussion regarding environmental liens and AULs.

3.3 SPECIALIZED KNOWLEDGE

Mr. Timarac and Mr. Czeck provided no specialized knowledge of the Subject Property beyond what was documented in historical environmental reports.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Based on DLZ's review of the completed Phase I ESA User Questionnaire, Mr. Timarac and Mr. Czeck, on behalf of DDOT, do not have information regarding the past uses of the Subject Property, including chemical usage and storage.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Neither the DBA nor DDOT provided record of valuation reduction of the Subject Property for environmental issues prior to preparation of this report.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Environmental Data Resources (EDR) was retained to provide a database search report of the readily available specified ASTM standard federal, state, and tribal record sources to at least the approximate minimum search distance, as identified in ASTM E1527-13. As part of the database search report, additional federal, state, and local regulatory environmental records and EDR proprietary environmental records were searched within a specified minimum search distance of the Subject Property established by EDR. A copy of the EDR Database Report, including a brief description of each database searched is provided in **Appendix C**.

DLZ reviewed the EDR database report to assess which environmental record sources identified sites located on, adjacent, or surrounding the Subject Property. EDR identified 107 sites of

known or potential contamination to be within the ASTM and/or EDR specified search radii of the Subject Property. DLZ evaluated the sites identified by EDR and determined that several sites were located on multiple databases. As a result, DLZ concluded that 71 site locations are present within the specified search distance from the Subject Property. These sites are listed in the table below:

As part of the initial Phase I ESA, on September 11, 2019 DLZ submitted a Freedom of Information Act (FOIA) request to the EGLE and City of Detroit FOIA Coordinator requesting to review records pertaining to the Subject Property. A second FOIA request was submitted as part of this Phase I ESA on July 14, 2021, which incorporated the 23 residential parcels along Ward Avenue and Compass Street. Records received were incorporated into relevant sections of this report. No records were provided for the residential parcels. Based on information provided by EGLE and City of Detroit, DLZ prepared a table to summarize the details of current and former aboveground storage tanks (ASTs) and underground storage tanks (USTs) that are currently or have historically been located on the Subject Property. The table is included as **Table 2**. It should be noted that soil was documented removed from the vicinity of Tank #11, so it is assumed the tank itself was also removed, although that could not be confirmed and therefore this tank status is listed as unknown.

Due to the presence of a former manufactured gas plant approximately 300 feet north of the Subject Property at 14270 Schaefer Highway (EDR Map ID #9-11), files for that address were also requested under the FOIA request. No relevant documents were provided to DLZ related to the 14270 Schaefer Highway former manufactured gas plant. Historical aerial photographs show a large aboveground storage tank approximately 300 feet north of the former Heating Plant Building from at least 1937 (the earliest historical aerial photograph available) through 1967, which was removed by 1972. On historical topographic maps, the tank is labelled Gas Tank. Prior to development of the Subject Property and the manufactured gas plant around 1935, a small creek formerly flowed from east of the Gas Tank area south onto the Subject Property as shown on the 1934 topographic map. This property is also listed in the WDS, AUL, and LUST databases, indicating potential contamination.

4.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS REPORT

EDR searched for record of environmental liens and/or activity and use limitations (AULs) records filed for 14044 Schaefer Highway. According to EDR, environmental liens and AULs were not identified for 14044 Schaefer Highway. EDR did not search for environmental liens or AULs on the

residential parcels located on the Subject Property. The EDR Environmental Lien and AUL Search is included in **Appendix D**.

4.3 PHYSICAL SETTING SOURCE(S)

The following physical setting sources were reviewed to assist in the preparation of this Phase I ESA.

Current Topographic Map

The current USGS Topographic Maps for the Subject Property (Dearborn, 2014 and Royal Oak, 2014) were reviewed as a part of the topographic maps package provided by EDR. Based on review of current and historic topographic maps, the Subject Property is located at an approximate elevation of 655 feet above mean sea level. A discussion of the current and historical topographic maps is presented in Section 4.4.

Geologic Information

Geologic maps of Michigan showing the bedrock and glacial geology of the state were reviewed on the EGLE website (<https://www.deq.state.mi.us/GeoWebFace/>). The bedrock map indicates that the bedrock in the Subject Property area consists of the Middle Devonian age Antrim Shale. The glacial map indicates that glacial deposits in Wayne County near the Subject Property generally exceed 100 feet in thickness and consist primarily of post glacial lacustrine clay and silt deposits with some inconsistent lenses of lacustrine sand and gravel. A shallow drinking water aquifer in the glacial sediments is not present in the vicinity of the City of Detroit.

Soil Composition

According to the EDR report, the dominant soil composition in the Subject Property area is Urban Land, which has a variable surface soil texture.

Hydrogeologic Information

Based on the topography search area, the EDR report estimated that the general topographic gradient at the Subject Property is to the south-southwest. Hydrogeologic information obtained by installation of wells on a specific site can provide groundwater flow direction in the immediate area. EDR documented that no site-specific hydrogeological data was found within a 1.25-mile search radius of the Subject Property.

4.4 HISTORICAL USE INFORMATION ON THE PROPERTY

Historical Documents

Historical documents used to ascertain prior uses and occupants of the Subject Property were acquired through EDR and the City of Detroit. Information obtained from these sources is discussed in the following sections.

Aerial Photographs

Historical aerial photographs for the Subject Property for the years 1937, 1940, 1949, 1952, 1957, 1961, 1967, 1972, 1976, 1981, 1983, 1997, 1999, 2005, 2009, 2012, and 2016 were obtained from EDR for review. The scale of each aerial photograph is 1" = 500'. Due to the large

scale of the aerial photographs and poor resolution of several aerial photographs, individual details could not be reliably discerned. Copies of the aerial photographs are provided as **Appendix E** and a summary of observations of the Subject Property made through review of the aerial photographs is provided in the following table:

YEAR	SCALE	COMMENTS
1937	1" = 500'	The Main Parcel of the Subject Property is developed with a large structure. Several streetcar tracks are present on the northwest portion of the Subject Property. The center of the Subject Property is used for storage of streetcars. The southern portion of the Main Parcel shows two structures, with the southern building being larger than the northern building. The eastern portion of the Main Parcel appears to be vacant/undeveloped. The north adjoining property appears to be vacant/undeveloped. The eastern and southern portions of the Subject Property appear to be residential. The west adjoining properties appear to have warehouses. There is a cylindrical storage tank approximately 300 feet north of the Subject Property.
1940	1" = 500'	In general, the Subject Property appears similar to the 1937 aerial photograph. The southern building on the Main Parcel was extended on the west side by approximately 150 feet. Additional details are hard to discern due to the quality of the image.
1949	1" = 500'	A small square structure is depicted in the northwest corner of the Subject Property. The northern and western portion of the Subject Property is taken up by automobile storage/parking. There is a large structure that occupies most of the western half of the Subject Property. There is a small rectangular structure and a chimney near the north-central portion of the Subject Property. There is another small rectangular structure to the south near the middle of the Subject Property. There are several small structures near the northeastern corner of the Subject Property. Sanborn Maps

DLZ requested that EDR provide historical Sanborn Fire Insurance Maps for the Subject Property. EDR provided Sanborn Maps dated 1926, 1941, 1950, 1953, 1956, 1961, 1978, 1983, 1986, 1990, 1992, 1996, and 2002 for the Subject Property. The poor resolution and/or illegibility of fire insurance maps can limit accurate interpretation. A copy of the EDR Sanborn Map Report is included in **Appendix F** and a summary of the historical use of the Subject Property, as documented on Sanborn maps, is provided in the following table:

City Directories

City directories of the surrounding area were obtained from EDR. The directories were reviewed at approximately 5-year intervals beginning in 1935 and ending in 2014 for the address 14044 Schaefer Highway, as well as surrounding addresses along Schaefer Highway. Surrounding addresses along Compass Street, Intervale Street, and Ward Street were reviewed from 1926 to 2014. The 14044 Schaefer Highway address was not listed in the city directories from 1935 to 1956. The property owner in 1965 was listed as DT&I RR (Detroit, Toledo, and Ironton Railroad) and the property owner in 1970 was listed as DSR (Department of Street Railways). In 1972, 1977, 1982, and 1987, several property owners were associated with 14044 Schaefer Highway. In 1992, 2000, 2005, 2010, and 2014, the City of Detroit was listed as the property owner in the city directories. 14044 Schaefer Highway was not listed in the city directory for 1995. Occupants of properties along Compass, Intervale, and Ward Streets appeared to reflect predominantly residential and some light commercial use. Copies of City Directories are provided in **Appendix H**.

Building Department Files

On July 14, 2021, DLZ submitted a FOIA request to review City of Detroit files for the parcels which are contained within the Subject Property, as shown on Table 1. No new information was obtained through the FOIA at the time of this report. However, during the 2019 Phase I ESA, DLZ obtained records from the City of Detroit FOIA Coordinator for BSEED records associated with the Subject Property. Records provided by BSEED included a “UST/AST Information” table which listed five USTs (four 25,000-gallon diesel tanks and one 10,000-gallon gasoline tank) present at the Subject Property. No additional pertinent information was obtained from these records. Historical records provided to DLZ during performance of recent Phase I ESAs at the Subject Property are included in **Appendix I**.

Zoning/Land Use Records

DLZ obtained current zoning information for the Subject Property via the zoning map available on the website <http://www.detroitmi.gov>. According to the zoning map, the Main Parcel is zoned M4: Intensive Industrial District and the parcels along the southern and eastern boundaries of the Subject Property are zoned R1: Single-Family Residential.

Fire Department Files

On July 14, 2021, DLZ submitted a FOIA request to review City of Detroit files for the parcels which are contained within the Subject Property, as shown on Table 1. No new information was obtained through the FOIA at the time of this report. However, on October 16, 2019 during the previous Phase I ESA, DLZ obtained records from the City of Detroit FOIA Coordinator for fire department records associated with the Subject Property. A record from October 1995 indicated 20-gallons of diesel and 10-gallons of gasoline were cleaned from the pump house and piping repairs were noted required. A document from March 25, 1995 indicated a broken gauge on the backup pump in the northwest corner of the pump house resulted in a leak of approximately 50 gallons of diesel which accumulated in the pump house pit, which was later evacuated by DDOT personnel and no further action was determined required by the DFD. An inspection from January 6, 1995 noted that overfilling of the 12,000-gallon gasoline UST should be discontinued. An inspection of the Subject Property by the Detroit Fire Department on December 2, 1994 revealed standing diesel which was “removed from pump house”. Residue remained that was suggested cleaned, and “one-half of the aqua system vault had standing diesel removed” and “the other half is still full of diesel.” The diesel from “office building sump” was also removed and cleaning suggested for this area. A total of approximately 800 gallons of diesel fuel was reported removed, and the inspection remarks suggested to “monitor the leaking auxillary pump.” An inspection in December 1993 noted issues including defective post indicator valves and an inoperative pit ventilation system, and an inspection from 1982 noted gauges were not working on the riser of the automatic sprinkler system. Other records documented an explosion and fire from a welder’s torch igniting gasoline vapors and gasoline within a nearby vault near gasoline dispensers and clarified that the aqua system contained three 50,000-gallon diesel USTs and a 12,000-gallon gasoline UST, as well as four 30,000-gallon diesel aboveground storage tanks (ASTs). The current and/or former locations of USTs and vaults represent RECs. Historical records provided to DLZ during performance of this Phase I ESA and the November 2019 Phase I ESA are included in **Appendix I**.

Property Tax Files

Property tax records were not made available to DLZ prior to the issuance of this report. According to public records, the Main Parcel encompasses approximately 19.66 acres, has a parcel number of 22029852 and is owned by the Detroit Department of Street Railways. Residential parcels along Compass Street and Ward Avenue are listed on the Detroit Parcel Map as owned by the Detroit Land Bank.

4.5 PRIOR ASSESSMENTS

The Michigan Department of Environment, Great Lakes, and Energy (EGLE) Remediation and Redevelopment Division (RRD) provided DLZ with copies of prior assessment reports completed on the Subject Property between 1999 and 2013. This section details the findings of those reports, as well as the Phase II ESA conducted by DLZ (May 2020).

Between 1999 and 2003, the Traverse Group completed several environmental investigations at the Subject Property, including an Initial Assessment, a Final Assessment, and two quarterly free product monitoring events. Throughout these investigations, The Traverse Group advanced 41 soil borings and installed seven temporary and nine permanent monitoring wells. These investigations determined that contamination had migrated off the site to the northern adjoining property, directly north of the former USTs.

Subsequently, during a groundwater sampling event in April of 2003, approximately 1.08 inches of petroleum free product was found in one monitoring well (MW-15) north of the Main Building. The free product thickness was monitored for six months, in ten separate events, and ranged between 0.12 and 2.76 inches at MW-15. Monitoring was terminated when product thickness was last recorded at 0.24 inches in October 2003. Free product was also monitored in six other monitoring wells (four off-site at adjacent Frisbee property to north, two on-site) but was not detected. According to the Amended Final Assessment Report (AFAR), a total of 6,260 cubic yards of soil, 2,800 gallons of contaminated groundwater, and approximately 272 gallons of free product were removed and disposed off-site during various site activities, including the closure of the former USTs and installation of the new USTs and communications line. A feasibility analysis was performed as documented in the AFAR, which recommended installation of bioremediation systems as the appropriate corrective action for the site, to address remaining contamination north and east of the Main Building. No documentation supporting construction of such systems were discovered during performance of this Phase I ESA.

In October of 2011, Gannett Fleming was retained by EGLE-RRD to complete additional environmental studies at the site. In January and February of 2012, they advanced 30 soil borings (for a total of 58 soil samples) on the Subject Property and installed three temporary monitoring wells. Gannett Fleming also located and sampled from three of the four existing permanent monitoring wells on the Subject Property, although they were unable to locate the monitoring well where free product was discovered in the environmental assessment completed by The Traverse Group in 2003. Fourteen of the thirty soil borings contained concentrations of volatile organic compounds (VOCs) and/or poly-nucleic acids (PNAs) above Michigan Part 213 Risk Based Screening Levels (RBSLs) for relevant pathways. Two soil samples also exceeded the soil volatilization to indoor air inhalation and soil saturation concentration screening levels. All other samples only exceeded the groundwater-surface water interface RBSL. Most exceedances were collected from the upper 2 to 6 feet of fill material or from the shallowest part of the clay unit. One sample was analyzed for diesel and oil range organics. The results were relatively high and could indicate remnant diesel fuel free product. Only one groundwater sample collected in January/February 2012 had concentrations of any compounds above an RBSLs. In the August

sampling event, two groundwater samples had detectable petroleum hydrocarbon compounds. Both of these samples were collected on the northern adjacent property. One of these samples did not exceed RBSLs, and the other sample only exceeded the groundwater-surface water interface RBSL.

Given the existing land use, and the stable and immobile nature of the soil and groundwater contaminants, Gannett Fleming recommended Monitored Natural Attenuation (MNA) with appropriate due care provisions as the most feasible remedial option for the Subject Property. Recommendations for compliance with due care included additional investigation to determine whether storm water sewers in proximity to contaminated soil and groundwater create a preferential pathway and therefore pose a groundwater/surface water interface (GSI) risk; and evaluation of indoor air quality related to potential vapor intrusion from nearby contaminated soil and groundwater.

On March 12, 2013, Gannett Fleming installed five sub-slab sampling points at the Subject Property. All five points were located within the bus refueling area in the north portion of the Main Building. The sampling was conducted to evaluate if there was an indoor air inhalation risk to users in the building due to potential residual contaminants in soil. Petroleum and chlorinated VOCs were detected in all five soil samples, in both field blank samples, and in the duplicate sample, but none of the concentrations exceeded applicable draft Michigan Department of Environmental Quality (now EGLE) Sub-Slab Industrial Acceptable Soil Gas Screening Concentrations (June 2008). The benzene concentration in SGP-2 (2,200 ug/m³) was equal to the RBSL.

On November 25, 2013, Gannett Fleming installed six sub-slab sampling points in the southeast corner of the Terminal Building on the northwest corner of the Subject Property. The samples were to be collected from the basement floor to determine whether there was an indoor air inhalation risk to building users based on residual contamination in soil or groundwater. When Gannett Fleming returned on November 26th, 2013 to collect the samples, five of the samples could not be collected because water had infiltrated the air sampling apparatus. A sixth vapor point was also unable to be sampled, likely due to low porosity caused by either tight clay immediately below the concrete or water filling the pores. Additionally, Gannett Fleming noticed a dark viscous material floating on the surface of the water in the basement sump on a November 15, 2013 site visit. The thickness of the material was measured at 0.02 inches.

DLZ previously completed a Phase I ESA on a portion of the Subject Property (Main Parcel) in November of 2019. Findings of that assessment are further summarized below and were incorporated elsewhere into this report where applicable. According to drawings provided to DLZ by EGLE-RRD, USTs were formerly located west, north, and east of the Main Building at the Subject Property. Aboveground storage tanks were also formerly located north of the Main Building. Two oil water separators were shown to the east and northwest of the Gas House, respectively. Tanks historically located onsite contained a variety of fuels and lubricants (e.g. diesel, engine oil, gasoline, waste oil, heating oil, etc.) and ranged in size from 500 gallons to 50,000-gallons. A total of 19 USTs were removed or closed-in-place at the Subject Property in

late 1999 and early 2000. Six new tanks were subsequently installed in the northern portion of the Subject Property in 2001 and remain in-place. These include four 25,000-gallon diesel tanks, one 10,000-gallon gasoline tank, and one 1,000-gallon used oil tank. A 550-gallon tank of unknown contents may remain at the Main Parcel at an unknown location. Five confirmed releases have been reported at the Subject Property, including three in 1999, one in 2000, and one in 2006. The 1999 confirmed releases were identified during construction activities related to UST removal and/or closure. The confirmed release in 2000 occurred when a diesel transfer pipe failed near the northwest portion of the Main Building. The confirmed release in 2006 was due to a leaking diesel fuel clamp. The historical use of the Subject Property for streetcar and bussing operations including bus maintenance and outdoor bus storage, and the current and former location of USTs, vaults, and oil/water separators represented RECs. Documented contamination of soil and groundwater in the 2003 Amended Final Assessment Report and historical confirmed releases also represented RECs. Historical documents and drawings provided to DLZ during performance of the May 2020 Phase I ESA and this Phase I ESA are included in **Appendix I**. No historical documents were provided for the residential parcels.

The initial Phase I ESA was the basis for performance of a Phase II ESA completed by DLZ as described below. A Phase II ESA was completed on the Main Parcel of the Subject Property by DLZ between November 13 and November 26, 2019. During the Phase II ESA, a total of 42 soil borings were advanced at the Subject Property. The 42 soil borings were generally advanced to depths ranging from 10 to 15 feet below ground surface (bgs). Up to two discreet soil samples from each boring were analyzed for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Michigan 10 metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc), and polychlorinated biphenyls (PCBs). Soil samples were also collected from the ground surface to two ft bgs at 12 locations. Additionally, soil samples were collected from stockpiled soils at four locations. Surface and near-surface composite soil samples were analyzed for VOCs, SVOCs, TCLP Resource Conservation and Recovery Act (RCRA) 8 metals (arsenic, barium, cadmium, chromium, lead, selenium, silver, and zinc), and PCBs.

Temporary monitoring wells were installed at eight soil boring locations (SB-01, SB-06, SB-08, SB-09, SB-15, SB-20, SB-27, and SB-33) for groundwater sample collection. Groundwater samples were analyzed for total VOCs, SVOCs, Michigan 10 metals, and PCBs based on the historical uses of the Subject Property and potential constituents of concern associated with those historical uses.

Four water/liquid samples were collected from the oily water observed in the pits located in the former bus repair shop and from the tunnel located between the Heating Plant Building and the Main Building. The water samples were analyzed for total VOCs, SVOCs, Michigan 10 metals, PCBs, and reactivity, corrosivity, and ignitibility (RCI) for waste disposal purposes.

Four wipe samples were collected from electrical equipment and adjoining building materials located in the Heating Plant Building, to determine disposal requirements. Wipe samples were collected from an area of approximately 100 cm² according to 40 CFR § 761.61(a)(6) and 40 CFR § 761.310 and analyzed for PCBs.

Findings of the Phase II ESA revealed the following:

- Shallow subsurface soils at the Site generally consist of sand with trace gravel and debris or fill sand from ground surface to approximately 5 feet bgs across the site. Below shallow subsurface soils, the Site generally consists of native clay, silty clay or sandy clay to a depth of 15 feet bgs, with the exception of the central and northern sections of the Site where soils have been disturbed and backfilled with sand. Water was encountered sporadically across the site at varying depths ranging from 4 to 11 feet bgs.
- Metals, VOCs, and/or SVOCs were detected in soil samples that exceeded the Statewide Default Background Level (SDBL), the Nonresidential Volatile Soil Inhalation Criteria (VSIC), Nonresidential Particulate Soil Inhalation Criteria (PSIC), the Nonresidential Direct Contact (DC) Criteria, and/or Nonresidential Residential Interim Action Screening Levels (RIASLs).
- VOC, SVOC, and mercury concentrations in soil did not exceed the Nonresidential Soil Volatilization to Indoor Air Inhalation (SVIAI) Criteria.
- SVOCs were detected in groundwater samples that exceeded the Nonresidential Groundwater Contact Criteria (GWCC).
- VOC, SVOC, and metal concentrations in groundwater did not exceed the Nonresidential Groundwater Volatilization to Indoor Air Inhalation (GVIAI) Criteria, the Nonresidential RIASLs, the Nonresidential RIASLs for Exposures Less than 12 hours (RIASL₁₂), or the Time-Sensitive RIASLs for Exposure Less than 12 hours (TRIASL₁₂).
- RCRA 8 metals TCLP leachate analytical results for composite soil samples collected at nine locations (four stockpile and five sitewide surface/near-surface) across the Subject Property indicated no samples exceeded applicable Maximum Contaminant Concentrations for the Toxicity Characteristic.

In general, soils representing potential inhalation concerns are located under the central and eastern portions of the Main Building and under the eastern portion of the Subject Property at depths ranging from approximately 1 foot to 6 feet below ground surface. Soils representing potential contact hazards for construction workers were primarily present under the central portion of the Main Building at depths ranging from approximately 1 foot to 6 feet below ground surface. Groundwater representing potential contact hazards for construction workers was located in two relatively small, isolated areas under the central portion of the Main Building and under the eastern portion of the Subject Property.

For future construction planning purposes, due to previously documented shallow soil and groundwater contamination in the vicinity of current and former USTs (north, west, and southeast of the Main Building) as well as contamination discovered beneath the central portion of the Main building and in the eastern portion of the Subject Property through the Phase II ESA,

soil and groundwater across at least 50% of the Subject Property should be considered contaminated. As such, necessary precautions should be taken by parties required to perform work on the Subject Property including but not limited to paving, demolition, grading/earthwork, utility upgrades or repairs, and others who may break ground to ensure compliance with relevant occupational health and safety regulations (i.e. 29 CFR 1910.120) that apply to a property of this nature.

DLZ completed a Phase II ESA to evaluate previously identified RECs at the Subject Property. Based on the data collected as part of the Phase II ESA, subsurface soils at the Subject Property contain contaminants at concentrations which exceed MDEQ Part 201 Residential Generic Cleanup Criteria and Screening Levels. As a result, the subject property is defined as a "facility" by Section 20101(1)(r) of Michigan's Natural Resources Environmental Protection Act, 1994 Public Act 451, as amended (NREPA). A "facility" is defined as: "any area, place or property where a hazardous substance in excess of the concentrations which satisfy the requirements of section 20120a(1)(a) or (17) has been released, deposited, disposed of, or otherwise comes to be located."

4.6 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

Based on the records reviewed in Section 4.4, the north adjoining property has been industrial in usage since at least 1967. The property north of that was operated as a manufactured gas plant starting prior to 1936. The western adjoining properties have been industrial in usage since at least 1926. Historical industrial uses of the northern and western adjoining properties have included a used automobile parts yard, machine shop, truck and tool repair shops, a roofing company, and several warehouses. The eastern and southern adjoining properties have historically been primarily residential in usage.

4.7 DATA FAILURE

Data failure is defined as a failure to achieve the historical research objectives set forth in ASTM Standard Practice E1527-13 section 8.3.1 through 8.3.2.2. ASTM Standard Practice E1527-13 specifies that all obvious uses of the Subject Property shall be identified from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier. The earliest standard historical source reviewed for this Phase I ESA was a topographic map dated 1905, which depicted a small structure present on or near the Subject Property. This apparent residential dwelling is assumed to be the first developed use of the Subject Property. Data failure was not believed to be encountered during completion of this Phase I ESA.

5.0 SITE RECONNAISSANCE

5.1 METHODOLOGY AND LIMITING CONDITIONS

A site reconnaissance was conducted by Mr. Daniel McNeely, Environmental Scientist, and Mr. Steve Zemcik, Construction Inspector with DLZ, on July 19, 2021. The site reconnaissance

included viewing accessible portions of the Subject Property. DDOT security was present at the Subject Property during the site reconnaissance. Portions of the Subject Property were not observed due to limiting conditions including standing water/oily water within below-grade basins and sumps, and fire, water, and weather-related damage, which prohibited evaluation of portions of the Main Building, Heating Plant Building, and residential dwellings due to safety concerns. The Fare Box Building was not accessed due to welded closed doors, and the antenna tower area in the east-central portion of the Subject Property was also not entered. Site reconnaissance photographs are presented as **Appendix J**.

5.2 GENERAL SETTING

The Main Parcel of the Subject Property, with a physical address of 14044 Schaefer Highway in Detroit, Wayne County, Michigan, consists of an abandoned former bus terminal. The Subject Property also includes adjoining residential parcels to the east and south which comprise a total of approximately 23 acres in an area of industrial, commercial, and residential land-uses. The Subject Property is located east of Schaefer Highway, south of Lyndon Street, west of Ward Avenue, and north of Compass Street between Interstate 96 (I-96) and the Lodge Freeway (M-10) on the west side of Detroit.

5.3 OBSERVATIONS

Current Use(s) of the Property

At the time of the site reconnaissance, the Main Parcel of the Subject Property was occupied by eight vacant structures with paved and vegetated areas that comprised the former Detroit Department of Transportation Coolidge Bus Terminal. A brick-faced Terminal Building was located in the northwestern corner of the Subject Property, and to its south were located two buildings, a former guard shack and dispatch building. A large structure, commonly referred to as the Main Building, encompassed much of the western portion of the Subject Property. Bus cleaning and fueling equipment and ancillary supplies and materials remained in various places throughout the Main Building, although it was primarily emptied of its former contents. The areas surrounding the Main Building were paved with concrete, and two outbuildings (former Fare Box Building and Heating Plant Building) were also present north/northeast of the Main Building. A large antenna tower and associated building are located in a fenced area east of the Main Building. The tower is supported with three guy-wires that are anchored on-site. An older antenna is present in the northeast portion of the Subject Property near a small single-story brick building, which is presumed to be associated with the former gasoline bulk unloading area. The majority of the remainder of the eastern portion of the Main Parcel was gravel covered and overgrown with vegetation. An abandoned streetcar track was found on the eastern edge of the Subject Property along with a concrete paved area. Several abandoned residential structures and vacant land were present on the southern and eastern portions of the Subject Property along Ward Avenue and Compass Street. An apparent occupied dwelling was present at 13500 Compass Street.

Past Use(s) of the Property

Past uses of the Subject Property are further documented in Section 4.4. Remnants of historical activities (e.g. streetcar tracks) and residential structures observed during the site reconnaissance appeared consistent with recorded site history. Past uses of the Subject Property other than those discussed in Section 4.4 were not identified during the site reconnaissance.

Hazardous Substances and Petroleum Products in Connection with Identified Uses

Petroleum products were not observed at the Subject Property in connection with identified uses by DLZ during the site reconnaissance. Tanks that appeared emptied were observed in the bus fueling area in the northern portion of the Main Building.

Storage Tanks

USTs were present north of the Main Building, near the bus fueling area. Diesel and motor oil ASTs were present within the northern portion of the Main Building but appeared emptied. An abandoned poly AST was found near the southeast portion of the Main Building, although its former contents could not be determined.

Odors

A phenol-like odor was observed in some areas of the Main Building on the Subject Property.

Pools of Liquids

Access pits below grade within the bus repair shop contained oily standing water. Puddles of oily water were also observed elsewhere within the Main Building, particularly in the areas of missing roof and the far eastern portion, as documented in the site reconnaissance photographs (**Appendix J**). Standing stormwater was also observed in the tunnel between the Main Building and the former Heating Plant Building as well as exterior locations.

Drums

Drums were encountered throughout the Main Parcel of the Subject Property. Drums appeared to contain chemicals associated with bus maintenance and repair, including antifreeze and transmission fluid, although a detailed inventory was not completed as part of this Phase I ESA. In some instances, drum contents could not be determined.

Unidentified Substance Containers

No containers of unidentified substances were observed on the Subject Property during the site reconnaissance other than those cited above.

PCBs

Older electrical equipment including transformers were observed in the former Heating Plant Building northeast of the Main Building. The electrical equipment was oil-stained and a gauge on the side of an oil reservoir indicated a yellowish oil within the equipment. Transformers were also observed suspended within the Main Building. No labelling regarding PCBs was observed on any of the potential PCB-containing electrical equipment.

Pits, Ponds, or Lagoons

Pits were observed within the former bus repair shop in the north-central portion of the Main Building on the Subject Property. These pits were used for access to the bottom of the buses for maintenance purposes and were observed to contain standing oily water at the time of the site reconnaissance. No ponds or lagoons were observed at the Subject Property during the site reconnaissance.

Stained Soil or Pavement

DLZ observed stained pavement, including on the floor of the Main Building and on the concrete pavement at several locations throughout the Subject Property. A large oil slick was present in the east-central portion of the Main Building which terminated at a crack in the concrete floor.

Stressed Vegetation

The eastern portion of the Subject Property was gravel covered and lacked vegetative growth in some areas. There were no other areas of obvious stressed vegetation observed on the Subject Property during the site reconnaissance.

Solid Waste

Solid waste including metal piping, fire extinguishers, and miscellaneous debris was observed east of the Main Building and in overgrown areas in the east-central and eastern portion of the Subject Property. A soil pile was also present east of the large antenna tower. During the site reconnaissance, DLZ did not observe obvious evidence that the Subject Property had been filled or graded by non-natural causes suggesting trash, construction debris, demolition debris, or other solid waste disposal. Sand was also observed spread across the flooring in the eastern portion of the Maintenance Garage within the Main Building; the origin of the sand is unknown.

Waste Water

The Subject Property area is serviced by the GLWA municipal sewer system. Storm water infiltrates directly into surface soil or follows drainage pathways to catch basins located throughout the Subject Property.

Wells

The Subject Property area is serviced by the GLWA municipal water system. Water pipes are depicted on historical Sanborn fire insurance maps adjacent to the Subject Property as early as 1926. DLZ observed no potable wells on the Subject Property during the site reconnaissance.

Septic Systems

The Subject Property area is serviced by the GLWA sanitary sewer system. DLZ observed no evidence of septic tanks on the Subject Property.

Drains and Sumps

DLZ observed drains and sumps throughout the Main Building including the former bus refueling area, former bus washing area, and former bus garage. The discharge location of drains and sumps could not be verified.

6.0 INTERVIEWS

6.1 INTERVIEWS WITH OWNER/OCCUPANTS

DLZ previously interviewed Mr. Boris Timarac, former Safety Administrator with the Detroit Department of Transportation (DDOT), during the initial Phase I ESA site reconnaissance on September 5, 2019. DLZ interviewed Ms. Bernadette Williams, Operations Manager with DDOT, over the telephone on October 10, 2019. DLZ also interviewed Mr. Richard Czeck, Chief Safety Officer for DDOT, on August 4, 2021. The information obtained from these individuals was incorporated into relevant sections of this report. No additional interviews were performed as part of this Phase I ESA.

6.2 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

DLZ did not conduct interviews with local Government officials because information from the government agencies was obtained through FOIA requests (see Section 4.4).

7.0 DATA GAPS

A data gap is considered a lack of or inability to obtain information required by the ASTM Standard Practice E-1527-13 despite good faith efforts by DLZ to gather such information. A data gap in itself is not considered significant. The following data gaps were encountered during completion of this Phase I ESA: observation of the Subject Property was limited at the time of the site reconnaissance due to the presence of overgrown vegetation; and portions of the Main Building, Heating Plant Building, and Terminal Building, and the entirety of the Fare Box Building, guard shack, dispatch building, and antenna tower buildings were not physically entered because these structures were locked. These conditions limited DLZ's ability to confirm the presence of RECs within those areas, which results in a data gap. Although the inability to access portions of the Subject Property, including structures, represents a data gap, this data gap is not considered to be significant.

8.0 FINDINGS

This Phase I ESA was conducted in general accordance with ASTM Standard Practice E1527-13 and constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice," as defined at 42 USC §9601(35) (B). The Phase I ESA was conducted to identify recognized environmental conditions that may exist, or may have historically existed, on the Subject Property. Information regarding the current and historical uses of the Subject Property obtained during the Phase I ESA includes the following:

- At the time of the site reconnaissance, the Main Parcel of the Subject Property contained eight vacant structures, including the former Terminal Building in the northwestern corner of the Subject Property, the Main Building taking up most of the western portion, the Fare Box Building

in the north-central portion, the Heating Plant Building northeast of the Fare Box Building, and the Antenna Building in the east-central portion of the Subject Property. In addition, the southern and eastern portions of the Subject Property consisted of vegetation-covered lots, several residential structures, as well as alleyways and vacated portions of streets.

- DLZ previously completed a Phase I ESA on a portion of the Subject Property (Main Parcel) in November of 2019. Findings of that assessment were incorporated into this report where applicable. The initial Phase I ESA was also the basis for performance of a Phase II ESA as described below.
- The Subject Property has historically been used as a bus terminal and for single-family residential and light commercial use. The Main Parcel of the Subject Property was used for streetcar storage and maintenance as early as 1928, and later transitioned to a combined streetcar and bus maintenance and storage facility, followed by a bus terminal. According to drawings provided to DLZ by EGLE-RRD, USTs were formerly located west, north, and east of the Main Building at the Subject Property. ASTs were also formerly located north of the Main Building. Three oil water separators are also present onsite as shown on Figure 2. Tanks historically located onsite contained a variety of fuels and lubricants (e.g. diesel, engine oil, gasoline, waste oil, heating oil, etc.) and ranged in size from 500 gallons to 50,000 gallons. A total of 19 USTs were removed or closed-in-place at the Subject Property in late 1999 and early 2000. Six new USTs were subsequently installed in the northern portion of the Subject Property in 2001 and remain in-place. These include four 25,000-gallon diesel tanks northwest of the gas house, one 10,000-gallon gasoline tank north of the gas house, and one 1,000-gallon used oil tank west of the pump house. A 550-gallon tank of unknown contents may remain at the Main Parcel at an unknown location.
- Five confirmed releases have been reported at the Subject Property, including three in 1999, one in 2000, and one in 2006. In addition, according to inspection notes from a December 1994 inspection by the Detroit Fire Department, approximately 800 gallons of standing diesel was discovered within the pump house “aqua system vault” which was subsequently removed. The 1999 confirmed releases were identified during construction activities related to UST removal and/or closure. The confirmed release in 2000 occurred when a diesel transfer pipe failed near the northwest portion of the Main Building. The confirmed release in 2006 was due to a leaking diesel fuel clamp.
- During the site reconnaissance, a phenol-like odor was observed in some areas of the Main Building on the Subject Property. Approximately 4-foot-deep pits were observed within the former bus repair shop in the north-central portion of the Main Building on the Subject Property. These pits were used for access to the bottom of the buses for maintenance purposes and were observed to contain standing oily water at the time of the site reconnaissance.
- DLZ reviewed the EDR database report to assess which environmental record sources identified sites located on, adjacent, or surrounding the Subject Property. EDR identified 107 sites of known or potential contamination to be within the search radii of the Subject Property. DLZ evaluated the sites identified by EDR and determined that 71 identified sites are located within

the approximate minimum search distance established by ASTM E1527-13 and/or EDR. The Subject Property was listed on the following databases: FINDS, RCRA NONGEN/NLR, ECHO, AST, LUST, UST, WDS, Financial Assurance, Inventory, and RGA LUST.

- The western adjoining properties have historically been commercial/industrial in use, including a used automobile parts yard, machine shop, truck and tool repair shops, a roofing company, and several warehouses. The northwest adjoining property was identified as a historical dry cleaner, though this appears due retail sales of laundry and dry-cleaning equipment and not operation of a dry cleaners. The eastern and southern adjoining properties have historically been primarily residential.
- In addition to the adjoining properties described above, a former manufactured gas plant was located approximately 300 feet north of the Subject Property at 14270 Schaefer Highway. Historical aerial photographs show a large aboveground storage tank approximately 300 feet north of the former Heating Plant Building from at least 1937 (the earliest historical aerial photograph available) through 1967 but was removed by 1972. On historical topographic maps, the tank is labelled Gas Tank. Prior to development of the Subject Property and the manufactured gas plant around 1935, a small creek formerly flowed from east of the Gas Tank area south onto the Subject Property as shown on the 1934 topographic map. This property is also listed in the WDS, AUL, and LUST databases, indicating potential contamination.
- Historical topographic maps indicated a small structure present on or near the southwest corner of the Subject Property in 1905, which is presumed to be a residential structure and the first developed use of the Subject Property.
- The following limitations were encountered during completion of this Phase I ESA that resulted in data gaps: Portions of the Subject Property were not observed due to limiting conditions including standing water/oily water within below-grade basins and sumps, and fire, water, and weather-related damage, which prohibited evaluation of portions of the Main Building and Heating Plant Building due to safety concerns. The Fare Box Building was not accessed due to welded closed doors, and the antenna tower area in the east-central portion of the Subject Property was also not entered. In addition, the residential structures located on the eastern and southern portions of the Subject Property were not accessed during the site reconnaissance.

9.0 OPINION

Based on the information obtained for this Phase I ESA, the following opinions are rendered regarding the findings in Section 8.0:

- The historical use of the Subject Property for bus maintenance and outdoor bus storage represents a REC;
- The current and former presence of USTs, ASTs, vaults, and/or oil/water separators on the Subject Property, including approximately 800 gallons of standing diesel fuel discovered within

the pump house “aqua system vault” during a December 1994 inspection by the Detroit Fire Department represents a REC;

- Five confirmed releases reported at the Subject Property resulting in soil and groundwater contamination on the Subject Property and the presence of elevated concentrations of contaminants in the soil and groundwater at the Subject Property at levels that exceed EGLE Part 201 Residential Generic Cleanup Criteria and Screening Levels represents a REC;
- The phenol-type odor and oily water in pits in the north-central portion of the Main Building represent RECs;
- The historical industrial uses of the adjoining properties to the north and west represent RECs; and,
- The former MGP site located approximately 300 feet north of the Subject Property represents a REC.
- Based on the status and/or distance from the Subject Property, as well as the predominance of low permeability silty clay soils in the Detroit metropolitan area which would likely inhibit migration of contaminants, the remaining sites of known or potential environmental contamination identified by EDR do not constitute RECs in connection with the Subject Property.
- Although the inability to access portions of the Subject Property represents a data gap, this data gap is not considered to be significant, and therefore does not represent a REC.
- DLZ completed a Phase II ESA in November 2019, with a final report date of May 2020, to evaluate previously identified RECs at the Subject Property. Based on the data collected as part of the Phase II ESA, subsurface soils at the Subject Property contain contaminants at concentrations which exceed MDEQ Part 201 Residential Generic Cleanup Criteria and Screening Levels. As a result, the subject property is defined as a “facility” by Section 20101(1)(r) of Michigan’s Natural Resources Environmental Protection Act, 1994 Public Act 451, as amended (NREPA). A “facility” is defined as: "any area, place or property where a hazardous substance in excess of the concentrations which satisfy the requirements of section 20120a(1)(a) or (17) has been released, deposited, disposed of, or otherwise comes to be located."

10.0 CONCLUSIONS AND RECOMMENDATIONS

DLZ has performed this Phase I Environmental Site Assessment of the Subject Property in general conformance with the scope and limitations of ASTM Practice E1527-13. Any exceptions to, or deletions from, this practice are described in the appropriate sections of this report. Based on the findings of this report, as well as results of the May 2020 Phase II ESA, DLZ recommends preparation of a Due Care Plan to allow contractors and construction personnel to take necessary precautions to prevent employee exposure to contaminants found at the Subject Property. Such precautions should be determined by employers performing work, based on the nature and scope of work to be performed, to ensure

compliance with relevant occupational health and safety regulations (which may include, but not be limited to 29 CFR 1910.120) that apply to a property of this nature. Such precautions may include collection of work area and/or personal breathing zone air samples to document concentrations of airborne contaminants, and to develop a site-specific health and safety plan that incorporates necessary administrative and/or engineering controls to ensure safe performance of work. For instance, 4-gas meters may be required to ensure work environments (particularly confined spaces, excavations, and trenches) do not contain explosive atmospheres.

Section 20107a of Part 201 of the NREPA specifically requires that owners and operators of a “facility” take Due Care measures to ensure that existing contamination on a property does not cause unacceptable risks and is not exacerbated. Due Care obligations are required for a person who owns or operates property that he or she has knowledge is a “facility”, regardless of whether the person is liable. The Due Care requirements were designed so contaminated properties could be safely redeveloped. Due Care obligations include the following:

- a) Undertake measures as are necessary to prevent exacerbation of the existing contamination;
- b) Exercise due care by undertaking response activity necessary to mitigate unacceptable exposure to hazardous substances, mitigate fire and explosions hazards due to hazardous substances, and allow for the intended use of the facility in a manner that protects the public health and safety;
- c) Take reasonable precautions against the reasonably foreseeable acts or omissions of a third party and the consequences that could foreseeably result from those acts or omissions.

11.0 DEVIATIONS

There were no deviations from the original scope of work, apart from the data gaps discussed in Section 7.0.

12.0 ADDITIONAL SERVICES

No additional services were requested regarding the Phase I ESA. Additional services provided by DLZ for the Coolidge Bus Terminal Main Parcel are discussed under separate cover.

G. SURVEYOR'S COMMENTS

- G1. THIS ALTANSPS LAND TITLE SURVEY IS BASED UPON A FIELD SURVEY PERFORMED BY SPALDING DEDECKER DURING SEPTEMBER 2018.
- G2. AN "AS SURVEYED" LEGAL DESCRIPTION FOR THE PROPERTY WAS WRITTEN AS SHOWN BUT NOT REQUIRED. HOWEVER DUE TO THE PROVIDED ALIQUOT PARTS LEGAL DESCRIPTION THE SURVEYOR WANTED TO INCLUDE A MEETS AND BOUNDS DESCRIPTION TO BETTER DESCRIBE THE PROPERTY AS IT WAS SURVEYED. DUE TO THE FACT THAT THE LEGAL DESCRIPTION FOR THE PROPERTY WAS AN ALIQUOT PARTS DESCRIPTION, THE MATHEMATICAL CLOSURE COULD NOT BE CALCULATED AND MEASUREMENTS COULD NOT BE COMPARED.
- G3. THIS SURVEY HAS BEEN PREPARED WITH THE BENEFIT OF A CURRENT TITLE COMMITMENT ISSUED BY FIRST AMERICAN TITLE INSURANCE COMPANY HAVING A KNOWN COMMITMENT FILE NO. 823461, COMMITMENT DATE JULY 6, 2018. THERE WERE NO FLOTTABLE EASEMENTS OF RECORD. THIS PROPERTY MAY BE SUBJECT TO OTHER UNRECORDED EASEMENTS, RIGHT-OF-WAY TAKINGS AND RESTRICTIVE COVENANTS THAT COULD ENCUMBER THIS PARCEL OF LAND.
- G4. THE BASIS OF BEARINGS OF THIS SURVEY IS IN RELATION TO THE WEST LINE OF "HAPPY HOMES SUBDIVISION" OF THE SOUTH 1/2 OF THE SOUTHWEST 1/4 OF THE SOUTHWEST 1/4 OF SECTION 20, TOWN 1 SOUTH, RANGE 11 EAST, GREENFIELD TOWNSHIP (NOW CITY OF DETROIT), WAYNE COUNTY, MICHIGAN, ACCORDING TO THE PLAT THEREOF, BEING RECORDED IN LIBER 31 OF PLATS, PAGE 69 OF WAYNE COUNTY RECORDS, HAVING A KNOWN BEARING OF NORTH 00' 45 MINUTES 00 SECONDS EAST.
- G5. THE UTILITY INFORMATION SHOWN ON THIS SURVEY IS BASED UPON A COMBINATION OF RECORD INFORMATION AND FIELD MEASUREMENTS. A MISS DIG DESIGN TICKET NUMBER OF 8082150141088 HAS BEEN REFERENCED TO THIS PROJECT AND A UTILITY PROVIDER CHART IS SHOWN ON THIS DRAWING. THERE ARE NO ASSURANCES THAT ALL PROVIDERS HAVE RESPONDED AND THE SURVEYOR DOES NOT GUARANTEE THAT ALL UNDERGROUND UTILITIES ARE SHOWN AND/OR POSITIONED PROPERLY ON THIS DRAWING DUE TO AMBIGUOUS PLANS AND RECORDS PROVIDED TO US. THE INFORMATION SHOWN ON THIS DRAWING IS INTENDED TO BE USED AS A GUIDE FOR POSSIBLE UNDERGROUND UTILITY CONFLICTS. IT IS THE RESPONSIBILITY OF OTHERS TO RESOLVE THE ACTUAL LOCATION OF ANY UNDERGROUND UTILITY THROUGH THE MISS DIG FIELD VERIFICATION SYSTEM PRIOR TO ANY SITE EXCAVATION. CALL 811 OR 800-482-7171.
- G6. THERE IS NO OBSERVABLE EVIDENCE OF ANY CEMETARIES, GRAVESITES OR BURIAL GROUNDS ON THE SUBJECT PROPERTY.
- G8. AS OF THE DATE OF THIS SURVEY, SEVERAL UNOCCUPIED SINGLE LEVEL INDUSTRIAL BUILDINGS EXISTS ON THE PROPERTY WITH VARIABLE HEIGHTS AS SHOWN ON THE SURVEY.

STRUCTURE TABLE

THE STRUCTURE TABLE ON THIS DRAWING IDENTIFIES THE AS-SURVEYED UNDERGROUND UTILITY MANHOLES THAT WERE FIELD MEASURED USING REASONABLE AND TRADITIONAL SURVEYING PRACTICES. PIPE SIZES, DIRECTIONS AND ELEVATIONS ARE INDICATED BY A COMBINATION OF FIELD EVIDENCE AND AVAILABLE RECORD INFORMATION. UNDERGROUND UTILITY PIPE SIZES AND CONNECTIONS ARE MANY TIMES AMBIGUOUS. SOME STRUCTURES MAY HAVE PIPES WITH UNKNOWN CONNECTIONS, SLURPS AND / OR PIPES THAT ARE FILLED WITH DEBRIS. IT WILL BE UP TO THE DESIGN ENGINEER TO LOOK AT THE PRESENTED SURVEY RESULTS AND DECIDE IF FURTHER INVESTIGATION BY OTHER METHODS SUCH AS VACUUM CLEAN OUT, UNDERGROUND RADAR, SMOKE TESTING AND PHYSICAL EXCAVATION IS REQUIRED AS AN ADDITIONAL SERVICE.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Hazardous waste / Contaminated Sites

MI INVENTORY: The Inventory of Facilities has three data sources: Facilities under Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) identified through state funded or private party response activities (Projects); Facilities under Part 213, Leaking Underground Storage Tanks of the NREPA; and Facilities identified through submittals of Baseline Environmental Assessments (BEA) submitted pursuant to Part 201 or Part 213 of the NREPA. The Part 201 Projects Inventory does not include all of the facilities that are subject to regulation under Part 201 because owners are not required to inform the Department of Environmental Quality (DEQ) about the facilities and can pursue cleanup independently. Facilities that are not known to DEQ are not on the Inventory, nor are locations with releases that resulted in low environmental impact. Part 213 facilities listed here may have more than one release; a list of releases for which corrective actions have been completed and list of releases for which corrective action has not been completed is located on the Leaking Underground Storage Tanks Site Search webpage. The DEQ may or may not have reviewed and concurred with the conclusion that the corrective actions described in a closure report meets criteria. A BEA is a document that new or prospective property owners/operations disclose to the DEQ identifying the property as a facility pursuant to Part 201 and Part 213. The Inventory of BEA Facilities overlaps in part with the Part 201 Projects facilities and Part 213 facilities. There may be more than one BEA for each facility.

A review of the MI INVENTORY list, as provided by EDR, and dated 01/20/2021 has revealed that there are 29 MI INVENTORY sites within approximately 0.5 miles of the target property.

MI PART 201: A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

A review of the MI PART 201 list, as provided by EDR, and dated 10/01/2013 has revealed that there are 4 MI PART 201 sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
