Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 06/29/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 06/29/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

INVENTORY: Inventory of Facilities

The Inventory of Facilities has three data sources: Facilities under Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) identified through state funded or private party response activities (Projects); Facilities under Part 213, Leaking Underground Storage Tanks of the NREPA; and Facilities identified through submittals of Baseline Environmental Assessments (BEA) submitted pursuant to Part 201 or Part 213 of the NREPA. The Part 201 Projects Inventory does not include all of the facilities that are subject to regulation under Part 201 because owners are not required to inform the Department of Environmental Quality (DEQ) about the facilities and can pursue cleanup independently. Facilities that are not known to DEQ are not on the Inventory, nor are locations with releases that resulted in low environmental impact. Part 213 facilities listed here may have more than one release; a list of releases for which corrective actions have been completed and list of releases for which corrective action has not been completed is located on the Leaking Underground Storage Tanks Site Search webpage. The DEQ may or may not have reviewed and concurred with the conclusion that the corrective actions described in a closure report meets criteria. A BEA is a document that new or prospective property owners/operations disclose to the DEQ identifying the property as a facility pursuant to Part 201 and Part 213. The Inventory of BEA Facilities overlaps in part with the Part 201 Projects facilities and Part 213 facilities. There may be more than one BEA for each facility.

Date of Government Version: 01/20/2021

PART 201: Part 201 Site List

A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEL PART 201: Delisted List of Contaminated Sites

A deleted site has been removed from the Part 201 List because information known to the DEQ at the time of the evaluation does not support inclusion on the Part 201 List. This designation is often applied to sites where changes in cleanup criteria resulted in a determination that the site no longer exceeds any applicable cleanup criterion.

A delisted site has been removed from the Part 201 List because response actions have reduced the levels of contaminants to concentrations which meet or are below the criteria for unrestricted residential use.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Version Date:	2014
South Map:	6066262 DEARBORN, MI
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ROYAL OAK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

5G	1/4 - 1/2 Mile SW	ESE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Devonian
Series: Upper Devonian
Code: D3 (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loam
clay loam

Surficial Soil Types: silt loam
loam
clay loam

Shallow Soil Types: silty clay loam

Deeper Soil Types: coarse sand
stratified
very fine sand
silty clay loam
silt loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data

Source: Department of Environmental Quality

Telephone: 517-335-9218

The data in this file was obtained from Wellogis, the Michigan Department of Environmental Quality Statewide Groundwater Database (SGWD). Wellogis contains approximately 425,000 water well records found within the State of Michigan, and although it represents the best available data, it cannot be considered a complete database of all the wells or well records in existence. Locations of verified municipal and private water well sites compiled from Michigan Department of Public Health, Water Well and Pump Records. Available in the following MI counties: Calhoun, Eaton, Genesee, Ingham, Jackson, Kalamazoo, Kent, Midland, Muskegon, Oakland, Ottawa, Saginaw, St. Clair, Washtenaw.

OTHER STATE DATABASE INFORMATION

Michigan Oil and Gas Wells

Source: Department of Environmental Quality

Telephone: 517-241-1528

Locations of oil and gas wells are compiled from permit records on file at the Geological Survey Division (GSD), Michigan Department of Natural Resources.

RADON

State Database: MI Radon

Source: Department of Environmental Quality

Telephone: 517-335-9551

Radon Test Results

Michigan Radon Test Results

Source: Department of Environmental Quality

Telephone: 517-335-8037

These results are from test kits distributed by the local health departments and used by Michigan residents. There is no way of knowing whether the devices were used properly, whether there are duplicates (or repeat verification) test (i.e., more than one sample per home), etc.

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by DLZ Michigan Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

**LEAKING UNDERGROUND STORAGE TANK
 SUPPLEMENTAL REPORT COVER SHEET**

INSTRUCTIONS: Complete this form with all applicable information. Attach this form to all supplemental Leaking Underground Storage Tank (LUST) submittals; this includes all reports other than the Initial Assessment, Final Assessment, and Closure Reports. The Certified Underground Storage Tank Professional (CP) MUST sign below. Please return this completed report cover sheet to the appropriate RRD District Office. See form EQP4410 for a complete list of RRD district offices. Use of this form to provide the listed information is voluntary.

IDENTIFY TYPE OF SUPPLEMENTAL REPORT: Amended Final Assessment Report

ANSWER ALL QUESTIONS

1. Type(s) of product released: Diesel

2. Free product present:
 a. Currently? YES NO If YES, total gallons recovered since last report: 1.19
 b. Previously? YES NO If YES, total gallons recovered to date: 1.19

3. Have vapors been identified in any confined spaces (basement, sewers)? YES NO

4. Estimated depth to groundwater: 3 to 9 feet Estimated groundwater flow direction: radial

5. Estimated distance and direction from point of release to nearest:
 a. Private well: > 1/2 Mile b. Municipal well: > 1/2 Mile c. Surface water/wetland: Detroit River, > 1Mile South

6. Since last report: a. cubic yards of soil remediated: 1,520 b. gallons of groundwater remediated: 0

7. Totals to date: a. cubic yards of soil remediated: 6,260 b. gallons of groundwater remediated: 2,800

8. Michigan RBCA Site Classification (1-4): 1

9. Has contamination migrated off-site above Tier 1 Residential RBSLs YES NO
 If YES, have off-site impacted parties been notified (per Section 21309a(3) of Part 213 YES NO

10. MTBE Has MTBE been detected in any groundwater sample? YES NO Maximum MTBE concentration found in groundwater 39 ppb.

CERTIFICATION OF REPORT COMPLETION

I, the undersigned CP, hereby attest to the best of my knowledge and belief that the statements in this document and all attachments are true, accurate, and complete. I certify that the report was submitted to the Remediation & Redevelopment Division (RRD)

**AMENDED FINAL ASSESSMENT REPORT
DETROIT DEPARTMENT OF TRANSPORTATION
COOLIDGE FACILITY, 14404 SCHAEFER HWY.
DETROIT, MI**

1.0 INTRODUCTION

Since the submittal of the Final Assessment Report (FAR), dated December 31, 2001, additional investigation activities were conducted (as proposed in Section 5.0 of the FAR). The purpose of conducting the additional investigation activities was to complete delineation off-site and to determine the groundwater characteristics/conditions upon completion of the site construction/renovation activities (consisted of concrete restoration, communication line removal/installation, demolition of above ground storage tank system, and demolition of the pump house) and approval of off-site access north of the site (O.H. Frisbie Moving and Storage).

A summary of the additional investigation activities and information not provided in the FAR are presented in the following sections of this report. In addition, updated figures, tables, and appendices are attached (refer to the Table of Contents for listing).

2.0 ADDITIONAL INVESTIGATION ACTIVITIES

The following additional investigation activities were conducted since the submittal of the FAR:

- A total of twenty-six borings were advanced. These borings were advanced by hand-auger (HA-6 through HA-14 and MW-15), hollow stem auger drilling (SB-1 through SB-4, MW-2, MW-3, MW-7, and MW-10 through MW-15), and Geoprobe® drilling (GP-36 through GP-41, GP-43 through GP-45).
- A total of four temporary monitor wells (HA-8, HA-10, HA-12, and GP-39) and nine permanent monitor wells (MW-2, MW-3, MW-7, MW-10 through MW-15) were installed.

Sample locations are depicted on Figures 3 and 4. Soil boring logs and well construction diagrams generated since the submittal of the FAR are included in Appendix A. Field procedures were conducted in accordance to Traverse Group's Field Standard Operating Procedures (SOPs), refer to Appendix D.

3.0 SUMMARY OF ANALYTICAL RESULTS

Soil and groundwater samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX) and trimethylbenzenes (TMBs) by U.S. EPA Method 8260, polynuclear aromatics (PNAs) by U.S. EPA Method 8270, and lead by U.S. EPA Method 6010/6020. These parameters were selected based on the known contents of the former tanks and historical analytical data from previous investigations conducted at the site. Soil analytical results are presented in Tables 1 through 4 and groundwater analytical results are presented in Tables 5 through 8.

Samples collect along the northern property boundary and off-site were compared to Tier I Residential Risk-Based Screening Levels (RBSLs). Samples collected on the site were compared to Tier I Commercial III RBSLs. The results of this comparison are summarized in Sections 3.1 (Soil Analytical Results) and 3.2 (Groundwater Analytical Results).

3.1 Soil Analytical Results

Analytical data from soil samples collected on-site were compared to the Commercial III RBSLs. The results of the comparison indicated that the following concentrations were detected above the Commercial III RBSLs (refer to Tables 1 and 3).

- 8N End (2-3' bg) - 1,2,4-trimethylbenzene (130,000 ug/kg).
- 13S Sidewall (3-4' bg) - benzene (9,300 ug/kg).
- GP-44 (2.5-3' bg) - 1,2,4-trimethylbenzene (160,000 ug/kg), xylenes (220,000 ug/kg).

3.2 Groundwater Analytical Results

Analytical data from groundwater samples collected on-site (Figure 3) were compared to the Commercial III RBSLs. The results of the comparison indicated that the following concentrations were detected above the Commercial III RBSLs (refer to Tables 5 and 7).

- GP-10 (7-12' bg) - benzo(a)anthracene (19 ug/L), benzo(a)pyrene (9 ug/L), benzo(b)fluoranthene (19 ug/L), benzo(k)fluoranthene (7.6 ug/L), chrysene (10 ug/L).

Analytical data from groundwater samples collected from the northern property boundary and off-site (Figure 3) were compared to the Residential RBSLs. The results of the comparison indicated that the following concentrations were detected above the Residential RBSLs (refer to Tables 6 and 8).

- MW-12 – benzene (5,700 ug/L).
- HA-1 (6-7' bg) – benzene (7,900 ug/L).
- HA-2 (6-7' bg)– anthracene (250 ug/L), benzo(a)anthracene (250 ug/L), benzo(a)pyrene (25 ug/L), benzo(b)fluoranthene (25 ug/L), benzo(g,h,i)perylene (25 ug/L), benzo(k)fluoranthene (25 ug/L), chrysene (250 ug/L), dibenzo(a,h)anthracene (25 ug/L), fluoranthene (250 ug/L), indeno(1,2,3,-cd)pyrene (25 ug/L), 2-methylnaphthalene (44,000 ug/L), pyrene (250 ug/L).

4.0 FREE PRODUCT DISCOVERY AND REPORTING

On April 16, 2003, free product was discovered on-site during a groundwater sampling event. The free product was detected in monitor well MW-15. Approximately 6-ounces (0.9-inches in thickness) of free product were removed from the well by hand-bailing with a disposable bailer and containerized in a 55-gallon steel drum (appropriately labeled and stored on-site pending disposal). All nearby monitor wells were screened for the presence of free product. Nearby storm drain catch basins and utility manholes were screened for possible hazardous or explosive vapors. The results of the screening indicated that no hazardous or explosive vapors were

quantity of free product encountered. For additional information, refer to the Quarterly Free Product Report (prepared by The Traverse Group and dated July 14, 2003).

As indicated in the July 2003 Quarterly Free Product Report, free product delineation will be conducted during the installation of the remediation system (September 2003). The next Quarterly Free Product Report is scheduled to be submitted to the Michigan Department of Environmental Quality (MDEQ) on or before October 15, 2003.

5.0 SITE CLASSIFICATION CHANGE

Since the submittal of the FAR, the site classification has changed from Class 3 to 1 due to the discovery of free product in MW-15.

6.0 CHANGES TO THE WORK PLAN OUTLINED IN THE FAR

The Work Plan summarized in the FAR (Section 5.3C) was implemented. Based on the conditions encountered in the field, additional soil borings and monitor wells were installed and the proposed sampling locations were adjusted for delineation and determination of groundwater characterization purposes.

7.0 ESTIMATED VOLUME OF IMPACTED SOIL IN THE VADOSE ZONE

The estimated volume of impacted soil above Residential RBSLs located on the northern property boundary and off-site is approximately 800 cubic yards (110 feet length x 20 feet width x 10 feet depth). The estimated volume of impacted soil above Commercial III RBSLs located on the site is approximately 300 cubic yards (10 feet length x 10 feet width x 3 feet).

8.0 SOIL REMEDIATED SINCE SUBMITTAL OF THE FAR

Since the submittal of the FAR, approximately 1,520 cubic yards of soil were removed and disposed off-site during site construction and renovation activities. The soil was transported and disposed at Waste Management Woodland Meadows landfill located in Wayne, Michigan (refer

9.0 GROUNDWATER CHARACTERIZATION AND CONDITIONS

Groundwater elevation data and contour map (April 14, 2003, elevation data) are presented in Table 9 and in Figure 7, respectively.

Site data were compared to the MDEQ Operational Memorandum No. 11 for the purpose of determining whether the groundwater at the site yields useable quantities to be considered an aquifer. The results of the comparison indicated that the groundwater encountered at the site is not an aquifer. The following findings were used for this comparison:

- Monitor wells installed within native material (clay) bailed dry after sustained bailing of less than 5-gallons, excluding the volume of groundwater initially present in the well casing and filter pack.
- Groundwater was encountered at depths ranging from 4 to 12 feet bg. As indicated in the boring logs (refer to Appendix A), saturation was observed from two-inch sand seams or fill material. In addition, the sand seams appear to be discontinuous across the site.
- Drinking water at the site and in the area is supplied by the city of Detroit. Wells installed and used for the purpose of drinking water is not allowed due to the city of Detroit Ordinance 256H.
- Five permanent monitor wells, each with 5-foot screens, were installed during the April/May 2002 investigation to obtain site hydrogeologic information. Monitor well locations are depicted on Figures 3 and 4. Limited hydrogeologic information was obtained from these wells, due to the low hydraulic conductivity of the native clays underlying the site.
- Temporary monitoring wells GP-1, GP-10, GP-39, and HA-2 bailed dry after purging and sampling.

10.0 EXPOSURE PATHWAY CHARACTERIZATION

The potential source of exposure at the facility is impacted soil. Potential transport mechanisms include volatilization and atmospheric dispersion, volatilization and closed space accumulation, leaching and groundwater transport, and utility corridors.

Soil or groundwater ingestion, direct contact with impacted soil or groundwater, and inhalation of volatilized constituents would be potential exposure routes. Potential receptors to the exposure routes would include construction workers, commercial utility workers, structures, and utility corridors. The identified exposure pathways are consistent with the FAR; therefore, no new exposure pathways were identified since the submission of the FAR.

11.0 FEASIBILITY ANALYSIS

A feasibility analysis was performed to determine the appropriate corrective action for the site. This analysis considered each option in terms of effectiveness of cleanup, duration, and cost.

11.1 Soil Corrective Action Alternatives

- *Natural Attenuation.* Impacted soils could remain in-place since there is a concrete cover over all impacted areas and existing monitor wells could be monitored quarterly. This alternative requires continued maintenance of the concrete and does not provide cleanup for contaminated soils detected above applicable RBSLs along the property boundary and off-site. This alternative will not eliminate acute risks to human health and to the environment; therefore, it is not recommended for an appropriate corrective action at the site.
- *Soil Excavation.* Impacted soil could be excavated and removed to a disposal facility. This would require the excavation and disposal of approximately 1,100 cubic yards of

- *Soil Vapor Extraction.* Soil vapor extraction is an alternative that can reduce the volume of petroleum hydrocarbons in the soil. Vent wells would be installed in the area of impacted soil and connected to a vacuum blower that would discharge to an activated carbon treatment system. Vapor would be removed in the activated carbon and then discharged to the atmosphere under the provisions of an air quality permit. A small building would be required to house the blower and activated carbon system. The Soil Vapor Extraction alternative is not viable due to the native clays underlying the site. Therefore, this alternative is not recommended.
- *Bioremediation.* The installation of a PER-PETUAL™ hydrogen peroxide remediation system (refer to Appendix B). The hydrogen peroxide will be pumped from a large storage tank through a control panel, which will regulate and distribute a very slow flow of peroxide through tubing to each injection point. Tubing will be routed through a network of trenches from the control panels to each point. There will be two types of injection points: 1) Shallow points which are designed to remediate shallow contaminated soils and 2) Deep points to remediate deeper soils and select areas with groundwater contamination. The cost of the system installation is approximately \$35,000 and the duration of cleanup is estimated as 1.5 years. The effectiveness of the PER-PETUAL™ system has been proven (refer to Appendix B for performance system data). In addition to the system, the area located near former Tank 8 would be injected (6 points) with hydrogen peroxide to enhance contaminate cleanup in a short duration. This alternative is recommended based on relatively low cost, short duration of cleanup, and proven effectiveness.

11.2 Groundwater Corrective Action Alternatives

- *Natural Attenuation.* In this alternative impacted groundwater would continue to migrate

- Groundwater Pump and Treat.* A groundwater collection system could treat impacted groundwater by using activated carbon to remove petroleum hydrocarbons. The groundwater pump and treat alternative is not viable due to the low hydraulic conductivity of native clays underlying the site and is considered costly. Therefore, this alternative is not recommended for corrective action at the site.
- Bioremediation.* The installation of the two separate systems ((MAV™ and PER-PETUAL™), which consists of a small 6-point system for cleanup of the free product and a larger 42-point system for cleanup of impacted soil and groundwater, will rapidly recover free product for elimination and cleanup impacted groundwater on- and off-site within approximately 1.5 years. In addition, the cost for system installation and O&M is moderate to low. This alternative is recommended for corrective action at the site based on moderate cost, effectiveness, and short-term duration for cleanup.

11.3 Feasibility Analysis Comparison Table

Corrective Action Alternative	Cost	Effectiveness	Duration
Soil Excavation	High	Good	Immediate
Soil Vapor Extraction	High	Poor	Moderate to Long-Term
Natural Attenuation	Low	Poor	Long-Term
Bioremediation Systems (MAV™ and PER-PETUAL™)	Moderate	Good	Short-Term

The selected corrective action alternative is the Bioremediation Systems. This is the most viable and cost effective option. Refer to Appendix B for Remediation System Operation and Maintenance (O&M) Manuals which also includes the system design layout for the

12.0 CORRECTIVE ACTION PLAN

12.1 Description of Corrective Actions

The corrective action will include the use of two separate systems and hydrogen peroxide injection in the immediate vicinity of former Tank 8 at the Coolidge facility. The systems and additional cleanup measures to be provided at the site are as the following:

- The Multi-Array Vacuum (MAV™) system is designed (6 point system) to recover free product for rapid elimination. The system is designed to be modified into the PER-PETUAL™ system. Refer to Appendix B for system details on installation, operation, and maintenance.
- The PER-PETUAL™ system is designed (42-point system) to clean up contaminated soil (particularly clayey soils) and groundwater by injecting hydrogen peroxide through selected injection points (refer to Appendix B for system design layout). The hydrogen peroxide converts to hydroxyl free radicals, which breakdown organic compounds. The oxidation of organic compounds reduces the carbon chain into smaller and smaller particles (ultimately converting to carbon dioxide, water, and simple compounds). Refer to Appendix B for system details on installation, operation, and maintenance).
- Six shallow injection points (separate from the above systems) will be installed to insert hydrogen peroxide in the immediate vicinity of former Tank 8 to provide rapid cleanup of impacted soils.

12.2 System Construction and Installation

MAV™ System

The MAV™ system construction details and figure depicting the installation/construction of the system are included in Appendix B. The next section describes the installation of the PER-PETUAL™ system.

turned off if desired. The free product that intersects each MAV™ extraction point is recovered into the screen by the vacuum being conveyed through the system.

The installation of each MAV™ point will be installed by hand-auger techniques and hollow-stem auger (HAS) drilling. The borehole will be advanced to just below the groundwater interface. Over drilling the borehole by 2 feet will allow easy movement of the MAV™ point (up or down as needed). The points will be installed in the immediate area of MW-15 (system configured so that 1 foot stainless steel MAV™ screen bisects the groundwater interface within the free product plume), where free product is present. Free product will be delineated during the installation of the system. Six points are proposed; however, additional points may be installed based on field conditions encountered during system installation activities. The points will be installed in a grid fashion (10 feet grid spacing). The length of each point will be constructed on-site and customized for the well screen to intersect the groundwater interface (according to depth of groundwater at the location). Due to the surface topography and depth of groundwater, the MAV™ point locations and lengths may change from each location to the next. To accommodate for these changes, each MAV™ length point will be surveyed and calculated to allow for a margin of error. In areas anticipated to have fluctuations in depth to groundwater, couplers and extensions will be added or removed to and from the riser pipe to allow for adjustability of the screen.

As indicated in Section 11.1, the MAV™ system will be designed to be modified into the PER-PETUAL™ system. The MAV™ system works using a vac-truck for 36-hours, once per month.

PER-PETUAL™ System

Hydrogen peroxide will be pumped from a large storage tank through a control panel, which will regulate and distribute a slow flow of peroxide through tubing to each injection point (refer to Appendix B for system design layout for the site). Tubing will be routed through a network of trenches (consisting of 6" to 8" wide x 24" deep, level bottom, 750 linear feet) from the control panels to each point. There will be two types of injection points: 1) Shallow points designed to

Backfill will consist of 3 feet sand, 1 foot bentonite, and the remainder with cuttings. The tubing installation will consist of 3/8" outer diameter (OD) x 1/4" inner diameter (ID) polyethylene or HDPE tubing rated to 160 psi. Tubing will be routed through trenches from the control panel to each injection point. All of the trenches will be backfilled with pea gravel. The pavement will be restored to the existing pavement thickness. Concrete trenches will be pinned with 1/2" x 4" rebar on 18" centers on opposite walls of the trench cut. All waste soil and materials will be containerized and disposed of. Refer to Appendix B for additional system details.

12.3 Operation and Maintenance Plan

The installation for the system is scheduled for mid September 2003. Prior to system installation, a baseline sampling event will be conducted for existing monitor wells located on the north portion of the site and off-site. The MAV™ system will operate using a vac-truck for 36-hours, once per month. Upon completion of the recovery of free product, the system will be modified to the PER-PETUAL™ system.

The PER-PETUAL™ system will operate by continually injecting a regulated amount of hydrogen peroxide into the injection point. The average injection pressure is estimated between 25 to 75 psi. The pressure will be automatically regulated by the control panel. The hydrogen peroxide will drain by gravity through the control panel and tubing into the injection points. Since the system is designed to self-regulate, increased pressure developed during chemical oxidation and bioremediation (exceeding the pressure of the supplied compressed gas) at specific injection points will be automatically stopped by the control panel and later resume when the pressure drops. Hydrogen peroxide flow to the points that do not exceed the pressure of the supplied compressed gas will continue.

The maintenance of the system requires that the hydrogen peroxide tanks be refilled as needed. The intervals at which they are refilled will depend upon the amount of the hydrogen peroxide absorbed by oxidation and bioactivity.

month. After the first month, the system effectiveness will be monitored once per month for the next two months and then quarterly thereafter.

The groundwater samples collected will be submitted for laboratory analysis of BTEX, 1,2-dichloroethane, 1,2-dibromoethane, naphthalene, 2-methylnaphthalene, and TMBs by U.S. EPA Method 8260, PNAs by U.S. EPA Method 8270, and lead by U.S. EPA Method 6020. The results of the sample analysis will determine whether any adjustments to the amount of hydrogen peroxide being injected are required.

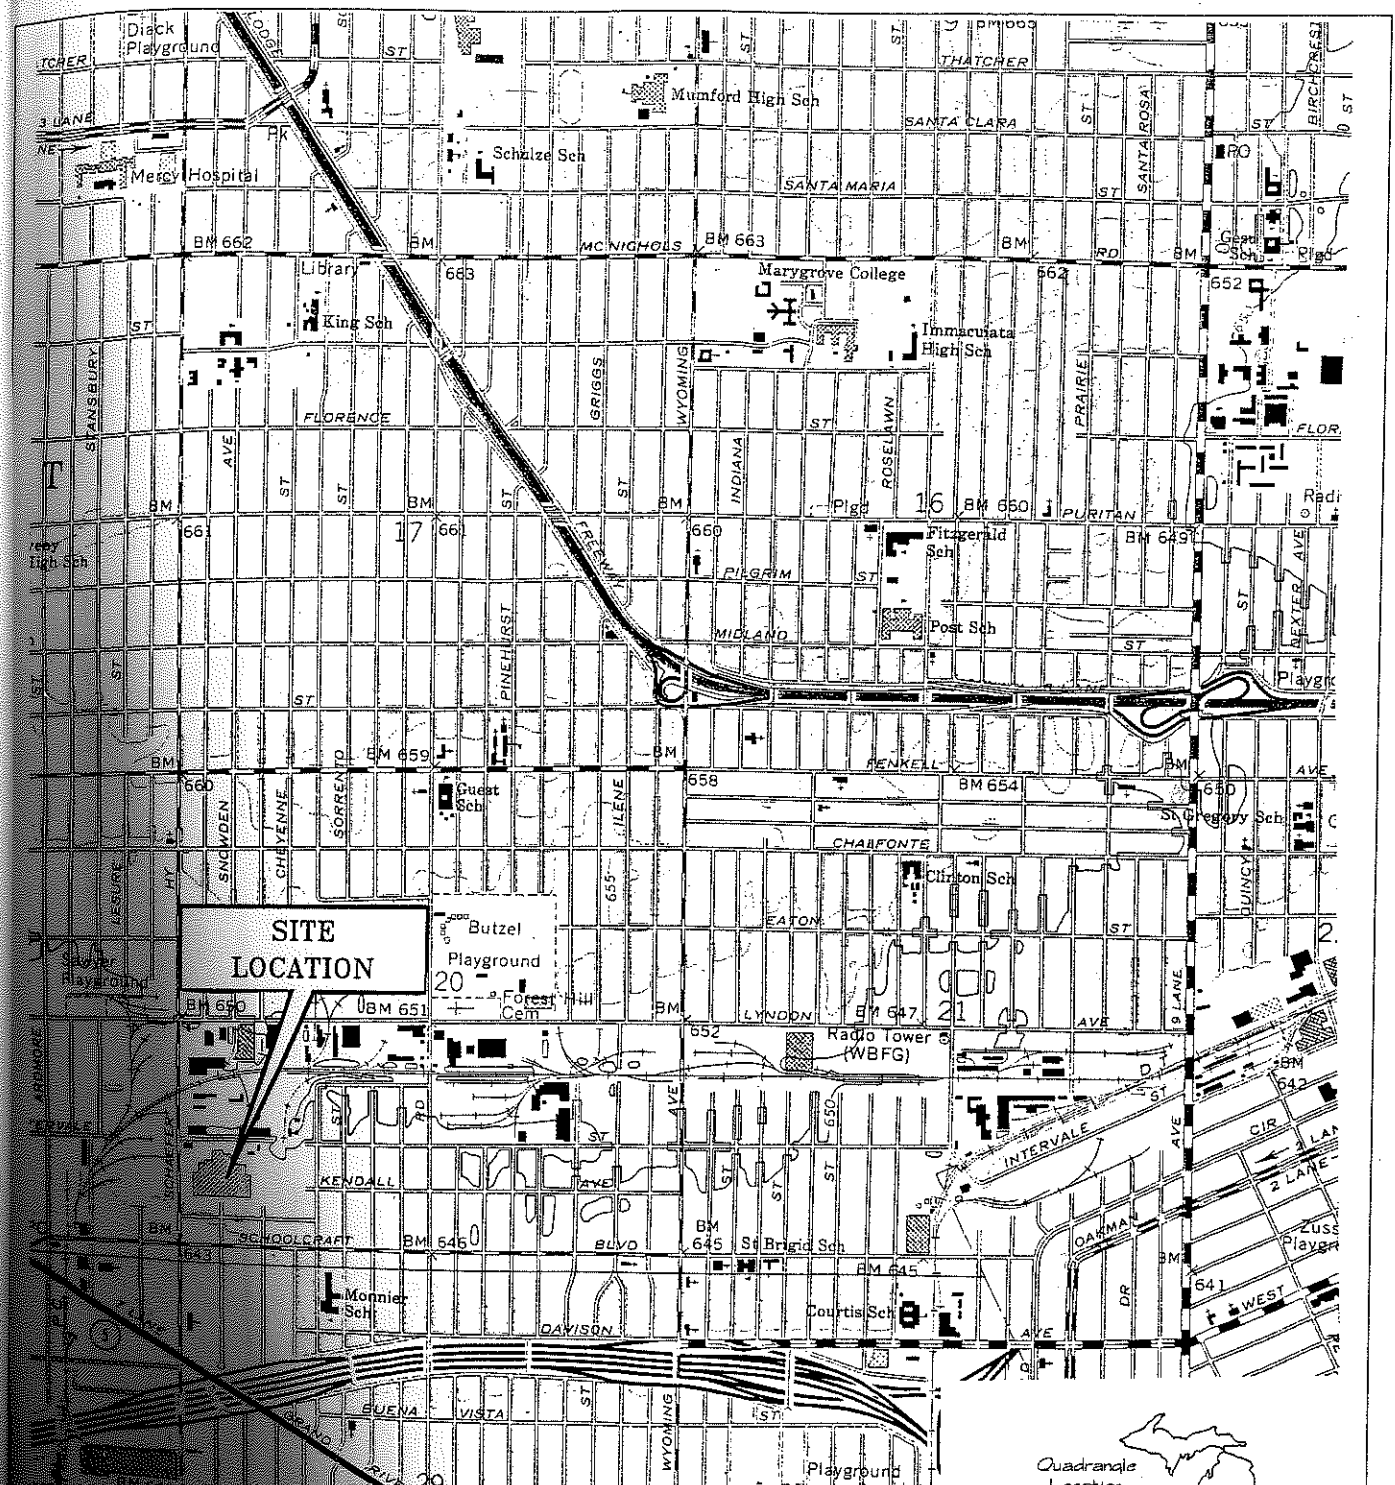

Quarterly monitoring results will be submitted to the MDEQ on a quarterly basis. Sampling protocol and procedures that will be conducted in accordance to the SOPs provided in Appendix D.

12.5 System Shutdown and Closure

Once appropriate RBSLs are achieved, the system will be shut-down. After system shut-down, quarterly sampling will be conducted for one year to monitor site conditions after shut-down. If site data indicates that contaminant concentrations are below applicable RBSLs after one year of monitoring, then the site will be prepared for closure.

In preparation for site closure, soil verification samples will be collected to determine if site conditions meet the criteria for closure. Upon determination of the site data meeting the requirements for closure, a Closure Report will be prepared and submitted to the MDEQ. The hydrogen peroxide storage tank, control panel, and the tubing will be removed upon approval of closure. The injection points will be decommissioned in-place with a bentonite/cement grout from the top of the tubes down into the injection points to seal the system and stop the movement of future contamination into the soil and groundwater.

Legend

UST# AND DESCRIPTION

- 12 - FORMER GASOLINE - 12,000 GAL REMOVED
- 13 - FORMER AQUA SYSTEM - 500 GAL REMOVED
- 14 - FORMER AQUA SYSTEM - 500 GAL REMOVED
- 16 - FORMER AQUA SYSTEM - 500 GAL REMOVED
- 17 - FORMER AQUA SYSTEM - 500 GAL REMOVED
- 18 - FORMER AQUA SYSTEM - 500 GAL REMOVED
- 8 - FORMER DEXTRON - 1,000 GAL CLOSED IN PLACE
- 5 - FORMER ENGINE OIL - 1,000 GAL CLOSED IN PLACE
- 6 - FORMER ENGINE OIL - 1,000 GAL CLOSED IN PLACE
- 7 - FORMER CONVERTER OIL - 1,000 GAL CLOSED IN PLACE
- 19A - DIESEL 25,000 GAL - IN OPERATION
- 20 - DIESEL 25,000 GAL - IN OPERATION
- 21 - DIESEL 25,000 GAL - IN OPERATION
- 22 - DIESEL 25,000 GAL - IN OPERATION
- 23 - GASOLINE 10,000 GAL - IN OPERATION
- CIP - CLOSED-IN-PLACE
- GAL - GALLON

C = Value presented is a screening level based on the chemical-specific generic soil saturation concentration (Csat) since the calculated risk-based RBSL is greater than Csat. Concentrations greater than Csat are acceptable cleanup criteria for this pathway where a site-specific characterization indicates that free-phase contaminant is not present. NA = Not Applicable or not requested for analysis. NLV = Hazardous substance is not likely to volatilize under most conditions. ND = Not detected at or above the MDEQ method detection limit.

Concentrations greater than Csat are acceptable cleanup criteria for this pathway where a site-specific cleanup level is not present. NA = Not Applicable or not requested for analysis. NLV = Hazardous substance is not likely to volatilize under most conditions. ND = Not detected at or above the MDEQ method detection limit.

C = Value presented is a screening level based on the chemical-specific generic soil saturation concentration (Csat) since the calculated risk-based RBSL is greater than Csat. Concentrations greater than Csat are acceptable cleanup criteria for this pathway where a site-specific assessment indicates that free-phase contaminant is not present. NA = Not Applicable or not requested for analysis. NLV = Hazardous substance is not likely to reach under most soil conditions. NLV = Hazardous substance is not likely to volatilize under most conditions. ID = Insufficient data to develop RBSL. ND = Not detected at or above the MDEQ method detection limit.

	Residential Soil Volatilization to Indoor Air RBSL (µg/kg)	NLV	NLV	400,000	400,000	18,000	4,200	NR	14,000	8,800	9,300	7,200	7,800	6,900	6,700	4,700	8,900	3,700	8,100	2,600	2,500	

Highlighted and shaded values exceed one or more listed Cleanup Criteria.
 C = Value presented is a screening level based on the chemical-specific generic soil saturation concentration (Csat) since the calculated risk-based MDEQ is greater than Csat. Concentrations greater than Csat are acceptable cleanup criteria for this pathway where a site-specific assessment indicates that free-phase contaminant is not present. NA = Not Applicable or not requested for analysis. NLL = Hazardous substance is not likely to leach under most soil conditions. NLV = Hazardous substance is not likely to volatilize under most conditions.
 ID = Insufficient data to develop RBSL. ND = Not detected at or above the MDEQ method detection limit.

Highlighted and shaded values exceed one or more listed Cleanup Criteria.

C = Value presented is a screening level based on the chemical-specific generic soil saturation concentration (Csat) since the calculated risk-based RBSL is greater than Csat. Concentrations greater than Csat are acceptable cleanup criteria for this pathway where a site-specific demonstration indicates that free-phase contaminant is not present. NA = Not Applicable or not requested for analysis. NLV = Hazardous substance is not likely to leach under most soil conditions. NLV = Hazardous substance is not likely to volatilize under most conditions. ID = Inadequate data to develop RBSL. ND = Not detected at or above the MDEQ method detection limit.

**RE: Freedom of Information Act Request No. A19-07685, Dated September 11, 2019
Concerning Environmental Records for 14044 Schaefer Hwy.**

Dear Mr. Sjoren:

We are in receipt of your check made payable to the City of Detroit in the amount of \$18.60, which reflects payment for the records pertaining to the City of Detroit Freedom of Information Act. Accordingly, enclosed please find the record in response to the above-referenced request.

Very truly yours,

A handwritten signature in blue ink, appearing to read "Sandra Wilson", written over a light blue circular stamp.

Attention: Mr. Donald L. Robinson, Fire Marshal

Subject: Fire Protection System, 14044 Schaefer Avenue

Dear Marshal Robinson:

Please excuse the delay in responding to your request regarding the condition of the fire protection system at the subject location. Be assured that this system is under constant inspection as it relates to its readiness to perform the function for which it was designed. The monthly tests are made according to code requirements.

Should you have any questions, please advise.

Very truly yours,

Harold F. Rose

James E. Bostick, General Mgr.
Dept. of Street & Railways
11200 Shoemaker
Detroit 13, Michigan

Dear Sir:

Article 12, of the Official Building Code of the City of Detroit, requires that inspections and tests of fire extinguishing equipment such as standpipes, fire pumps, sprinkler systems and interior fire alarm systems in buildings be made by the owner or his authorized representative, and that a record of the tests be filed in the office of the Fire Marshal.

This Division has no recent record of a test of your fire extinguishing equipment, namely:

Sprinkler and Fire Alarm Systems protecting the entire building at 5600 Wabash. Building occupied as Repair Garage.

Sprinkler and Fire Alarm Systems protecting the entire garage building at 14044 Schaefer. Building occupied as Repair Garage.

Sprinkler, Standpipe and Fire Alarm Systems protecting the entire three (3) garage buildings at 11200 Shoemaker. Building occupied as Offices and Garages.

Will you please arrange to test the above specified equipment and submit a statement as to its condition to the Fire Prevention Division, Fire Headquarters, 250 W. Larned St., Detroit 26, Michigan, by OCTOBER 7, 1962. The statement shall bear the stamp of approval of a recognized testing firm, or be signed by one of the officials of the department.

A copy of the regulations pertaining to the testing and maintenance of fire extinguishing equipment is enclosed. If further information is required, please contact this office.

Yours truly,

Glenn E. Thom
Fire Marshal

March 24, 1964

Mr. Bernard F. DeCoster
Fire Prevention Division
Detroit Fire Dept.
250 W. Larned Street.
Detroit 26, Michigan

Dear Sir :

In reference to your letter of February 25, 1964,
regarding our property at 14044 Schaffer, and article 12 of
the official building code of the City of Detroit.

Pleased be advised that fire extinguishing equipment
at 14044 Schaffer and at all locations of the D.S.R. including
stand pipe, sprinkler system, valves, hoses and assessories
and the various sizes and types of extinguishers are inspected,
tested, weighed and recharged as required on a regularly
scheduled basis as follows:

1. Sprinkler tank (located at H.P.) drained, cleaned,
inspected and repaired as recommended by a registered
steeple jack every 3 years. Water level in tank checked
daily.
2. Alarm systems tested every 30 days for volumm of water
flow and condition of alarms.
3. Sprinkler system subjected to a Hydrostatic test of
100 PSI every five (5) years (most recent test completed
on all systems with no evidence of leakage March 1964)
4. Portable fire extinguishers and hoses inspected, tested,
weighed and/or recharged yearly or as required.

Trusting this meets with your requirements and approval,

Sincerely,

Rose
Supv. of Plant Maintenance

3/27/64

Acceptable for
all locations.

COLD WEATHER GUIDE TO SPRINKLER MAINTENANCE

Property of City of Philadelphia (Owner or Occupant)
Philadelphia (City) Philadelphia (Street)

1. Do you make frequent thorough inspections of sprinkler equipment during winter months?
2. Have you arranged to notify this Bureau **WELL IN ADVANCE** if sprinklers are to be shut off **EITHER IN PART OR ENTIRELY**, or of **ANY INTERRUPTION OF THE HEATING SYSTEM OR AUTOMATIC SPRINKLER PROTECTION**?

NOTE: Before replying to the remainder of the questions, the Automatic Sprinkler Equipment should be **THOROUGHLY EXAMINED** so that the answers will **POSITIVELY** describe the condition of the system. Failure to observe these precautions can result in serious damage to the sprinkler equipment and extensive water damage to your plant and its contents.

We call your attention to the provision of your fire insurance policy which requires that due diligence shall be used at all times by the insured to maintain sprinkler equipment in complete working order.

GENERAL

3. Are valve pits, post indicator valve housings and hydrant barrels free from water?
4. Do all shut-off and drain valves operate properly? (If not, serious water damage may result from leaks through inability to stop the flow.)
5. Are all alarms in working order?

DRY PIPE SYSTEMS

6. Is all piping designed to drain back to the dry pipe valve? If not, are the trapped portions provided with drain valves at the low points for removing water condensed or otherwise collecting at these points?
7. Have these points been drained recently and are the drain valves tried frequently in cold weather?
8. Has piping settled in any locations? If so, has drainage been corrected wherever this occurred?
9. Are the dry pipe valves properly set, with all leaks eliminated? Are valve locations adequately heated? Is a thermometer provided?
10. Is air pressure being checked daily? (Low temperatures will reduce air pressure.)

WET PIPE SYSTEMS

11. Are there any wet pipe sprinklers in concealed spaces beneath floors or above ceilings in wind etc. If so, have arrangements been made for sufficient heat to reach them to prevent freezing?
12. Are there any portions of piping which contain non-freezing solution? Has solution been tested recently, and brought up to proper strength?
13. Are there any portions of piping which must be regularly shut off in freezing weather? If so, give approximate date when these are shut off.
14. Are all windows, doors, skylights and other openings tight? Has someone been delegated to close doors, windows, ventilators, etc. when cold weather is anticipated?

GRAVITY TANKS

15. Has the tank heating apparatus been tested to determine if it is in good working order, and if last winter you had any trouble keeping tank and riser pipe from freezing, have you found the cause and remedied same?
16. Are gravity tank lights and air supply lines arranged so to protect for accumulation on tank covers or roofs?

PRESSURE TANKS

17. Is tank contents properly heated?
18. Is tank pipe connection against freezing? Are water pipes properly drained?

NOTE: If any trouble is anticipated or if any problem arises in answer to these questions, please contact us at once so that we may advise you what should be done in order to prevent any interruption of the sprinkler protection. This service is rendered without charge. In the event of any emergency, please notify the Bureau immediately and also give us a return call, Bureau without delay. We recommend that an experienced and responsible person be assigned the feature of regular practice in service to quickly be available.

Detroit, Michigan 48213

Subject: D.S.R. Garage
14044 Schaefer

Dear Sir:

An inspection was recently made by this Division of the garage at the above location relative to fire lanes in the bus storage areas.

When the garage area was originally set up it was arranged so that the coaches would be parked and there would be nine (9) cross aisles leading from the North to the South with intervening aisles between the coaches leading to the main center aisle of the building. Parking was arranged in this manner so that in case of a fire or any work to be done on the coaches the men would be able to move with ease. At the present time the coaches are parked so that there is a four foot (4') lane between each coach and there are only five (5) aisles maintained from North to South in the building. This arrangement although it does not agree with the original set up, upon inspection seemed reasonable and will be acceptable to this Department.

The present arrangement should be maintained in the cross aisles painted in so that the aisles can be easily maintained.

The Code requires that horizontal exits from any one area can not exceed 150 ft. in any one direction.

Very truly yours,

Bernard F. DeCoster
Fire Marshal

Dear Sir:

An inspection was recently made of the garage located at 14044 Schaefer and occupied by your department.

The investigation revealed some violations and the following recommendations are made:

1. Discontinue parking cars and buses in the fire lanes. This should be strictly enforced.
2. Discontinue the practise of smoking throughout garage area. Smoking should be permitted only in the sections of the building not used for garage purposes.

Yours very truly,

Matthew H. McKally
Assistant Fire Marshal

Details of investigation

Contacted John Goodman Foreman D.O.T. Bus Terminal who directed us to the outside Pump location where explosion and fire took place. Proceeded to take readings of the sump and surrounding sewers. Received a 40% read in the sump with explosion meter, -0- reads in the sewers directly WEST, SOUTH, EAST of the sump. The D.O.T. Siphoning Pump truck arrived and removed the top 12" to 18" of sludge in the sump after which the explosion meter reads we down to 18%. We continued the siphoning procedure, then ordered the sump filled with water. We also instructed Comb groves Inc. Contracting company to discontinue all work until follow up Re-Inspection.

Form C of D-58-CO (Rev. 4-69)

Details of investigation I contacted Sgt. Robert Pepper Ladder 25 upon arrival in yard.

Investigation revealed workmen were using a torch burner unit near 2 steel covers of a vault near gas pump. Sparks from torch ignited gasoline fumes and gasoline on top of water in vault. The 2 steel covers blew off the opening of vault. Fire was there confined! Workman used a dry chemical fire extinguisher to extinguish fire.

Steve Cichy, Senior Foreman of D.P.T. garage operations called D.P.T. at 1301 W. Warren to get pump to remove water & slight film of gas from vault.

Details of investigation

I received 60% read on Z meter in vault.

Night crew to take read in vault after water and gas film are pumped out of vault.

The present tank in vault (aqua system) is being placed out of service in about 2 months, & a new tank at west end of yard is to be in operation.

Virgil Egeland, maintenance man for D. C. I. stated water will refill in the vault in a short time.

Wet rags are to be placed over manhole covers in vault before any further use of A. B. H. & Z meter reads shall be celebrated also. Recheck in A. M. 12-20-79.

Survey for Extinguishers at Coolidge D.S.R. Terminal
Wolff Schaefer

BOILER HOUSES:

This is a one-story, no basement, brick, concrete and steel building. Approximate size is 60' x 50', total area, 3,000 sq.ft. Found two 15% CO² fire extinguishers, recharge tags dated January, 1958.

Recommendations: None.

FARE BOX HOUSES:

A one-story, no basement, sheet metal building heated by two individual oil-fired space heaters. Found one 2½-gal. foam extinguisher and one 2½-gal. soda and acid extinguisher, recharge tags dated June, 1957.

Recommendations: None.

GASOLINE BUILDING AND WASH RACK ADDITION:

This is a one-story, no basement, brick, concrete and steel building. Gasoline section of building is used for gassing up coaches. There are fifteen gasoline and diesel pumps in this section of the building. The wash rack area is a continuation of the building. The gasoline pump area is the only sprinklered section of these areas. Approximate sizes of these two areas is 110' x 93' for the gas pump house and 35' x 100' for the wash rack. Combined total is 13,730 sq. ft. Requires six Class B extinguishing units. Found ten 15% CO² extinguishing units and one 40-gal. foam cart, recharge tags dated September, 1957.

Recommendations: Redistribute four of the 15% CO² units in this building to other areas in the Terminal, where required.

TROLLEY COACH WASH RACK:

This is a one-story, brick, concrete and steel sprinklered building. Approximate size is 48' x 210', total of 10,080 sq.ft. Requires five Class B extinguishing units. Found five 15% CO² units in this area, recharge tags dated June, 1957.

Recommendations: None.

COACH REPAIR HOUSES:

This is a one-story, brick, concrete and steel building. Approximate size is 140' x 560', combined area total of 78,400 sq.ft. Requires thirty-two Class B extinguishing units. Found nineteen 15% CO² units and one 40-gal. foam cart. The oil storage room in an adjacent area is protected with one 15% CO² unit. Recharge tags dated June, 1957. The service and repair pits in this building, numbering twenty-two, are protected by eleven 15% CO² units.

Recommendations: Provide and install twelve additional Class B extinguishing units.

APPLICATION FOR INSTALLATION OF INFLAMMABLE LIQUID STORAGE TANKS

Date June 19 19 47

Applicant Petroleum Systems, Inc. Address Shoemaker & St. Jean

Owner Detroit Street Railways Address 2914 E. Grand Blvd.

Address of Installation Coolidge Garage 14044 SCHAEFER
(House Number and Street)

Between Compass and Lyndon Streets

Description of tanks and liquids:

Number	Dimensions	Capacity (Gallons)	Kind of Liquid	Flash Point F.
1. <u>1 new</u>	<u>45 1/2" x 6'-7 1/2"</u>	<u>550 gallon</u>	<u>Alcohol</u>	
2.				
3.				

Do tanks bear Underwriters' Labels? Yes Nature of business Public Transportation

LOCATION:

Underground Yes Under Building No

Distance to nearest private property line Over 10'

Distance to nearest basement or pit in any building Over 10'

Will tanks be encased in 6" of concrete with sand backfill?

Overground Distance to nearest private property line

Is this a new installation, addition, or replacement?

Distance to nearest tank Kind of dyke

Are tanks outside of fire district? Date 6.27 1947

Does applicant agree to meet all legal requirements? Yes By J. Mc Lane

Date curb cut approved by the Common Council

APPROVED
DETROIT FIRE DEPT.
Fire Prevention Bureau

(DO NOT FILL IN)

EXAMINER Has proposed location been inspected by this department? No

Have duplicate blue prints been submitted and approved? No

Application approved by Walter Jenkins Date JUN 26 1947

Permit Number Issued

Answer questions on reverse side of application relative to the requirements of Zoning Ordinance No. 171-D effective December 25th, 1940.

TO BE ANSWERED BY APPLICANT

DEPARTMENT OF BUILDINGS & SAFETY ENGINEERING

Is this installation to be used in connection with present buildings now located on the property? Yes

Are any new buildings to be erected; or present buildings altered or enlarged in connection with this installation? Yes

Answer questions on reverse side of application relative to the requirements of zoning Ordinance No. 11-D effective December 27th, 1946.

LINE DIVISION (TRUCK STORAGE AND STOCK STORAGE):

This is a one-story, brick and mill unsprinklered building. Size is 80' x 150', total area of 12,000 sq. ft. Requires five Class B units; has none.

Recommendation: Install at least five Class B extinguishing units. (Either 2 1/2-gal. foam or 15# CO²).

COACH STORAGE GARAGE:

This is a one-story, brick, concrete and steel sprinklered building. Size, 215' x 660'. Divided by fire walls into five areas:

<u>Lanes</u>	<u>Construction</u>	<u>Size</u>	<u>Extinguishers</u>	<u>Required extinguishers</u>
1,2,3,4,5	Sprinklered brick, concrete & steel	60' x 660'	13 - 15# CO ²	16 Class B
6,7,8	"	40' x 660'	17 - 15# CO ²	11 Class B
9,10,11	"	40' x 660'	17 - 15# CO ²	11 Class B
12,13,14	"	45' x 660'	19 - 15# CO ²	12 Class B
15,16,17,18,19	"	60' x 660'	30 - 15# CO ²	16 Class B

Total area: 161,700 sq. ft., divided into five fire lanes by fire doors and fire walls.

Total number of 15# CO² units in building at present: 116
 Total number of 15# CO² units required by Code: 66
 Total number of 15# CO² units in excess: 50

Recommendation: Locate a total of 80 - 15# CO² extinguishers in these areas so that:

1. 16 - 15# CO² extinguishers will be provided and maintained in each bay in the following manner:
 - (a) Install 4 - 15# CO² extinguishers at each fire lane so that the extinguisher units will be available within two feet of the fire doors.
2. Remove 36 - 15# CO² extinguisher units and locate elsewhere in the Terminal, where required.
3. Designate the fire extinguisher locations on wall surfaces with a fluorescent paint.
4. Mark off and designate necessary fire lanes with fluorescent paint.
