

WINDOWS

We will follow the regulations and guidelines from the Historic Preservation Authorities in order to preserve the historic character of the windows. Status of the property does not have half of the windows and the other half are vinyl windows, however rehabilitating historic properties involves restoring and preserving them while also adapting them for safe and modern use. We will keep in mind the fact that repairing windows of a historic district involves using techniques and materials consistent with the original construction so we will use Aluminum clad wood windows.

We will preserve the current existing wooden frames or cases as they contribute to their architectural character and authenticity. We understand that preserving and maintaining the wooden window cases is crucial for the conservation of the historic properties and the district itself.

We will preserve the craftsmanship of the existing windows and frames by refinishing them to their original estate.

Material: Aluminum clad wood

Configuration of the proposed replacement windows: We will repair and in some cases, depending on its condition, replace the existing windows with ones that have the exact same configuration as the former windows.
